SHAKESPEARE'S PANSIES

... and there's Pansies, that's for thoughts."—
Hamlet

Four years ago a little stray Pansy was discovered in our growings, that was so simple, quaint, and sweet, that we saved it for seed, and now offer it for the first time on our 70th Anniversary! It is in no sense a large florist Pansy, but is of the quaint, unique type of the Pansies of Shakespeare's time, described in the book "Flowers from Stratford on Avon." It is almost identical with the old and original variety of Pansy, prettily marked, with many petals reflexed, charming and different. Mixed colors. 2283 — Pkt., 25c; 2 pkts., 45c; 1/2 oz., \$1.25.

SALZER'S CALIFORNIA GIANT DOUBLE ZINNIAS

This beautiful Zinnia has smaller centers and more loosely placed petals than the old type of Large Flowering Zinnias and the size of the flower has been notably increased. The petals are decidedly imbricated and the flower from bud to bloom assumes a succession of graceful forms. 3 to 4 feet.

The flowers are truly giant in size, frequently measuring 6½ to 7 inches in diameter, and are borne on long and strong stems. When cut the graceful blooms last exceptionally long in water, and make a lovely bouquet. Everyone who has seen them has greatly admired this lovely new mammoth type of Zinnia, and its lovely range of colors. We offer it with the confidence that it will be a most welcome addition to the flower garden.

BRINGS YOU THE
BIGGEST BARGAINS IN

Seventy Years

January 10, 1938,
La Crosse, Wisconsin.

To Our Customers and Friends:

Today we are having zero weather but it won't be long before the urge of gardening again makes its appearance. Spring will be here before we know it and with this in view we have worked for the last six months in order to bring you bigger and better values for our SEVENTIETH ANNIVERSARY. Seventy years in the seed business is a long time, during which the experience gained cannot help but be of benefit to our customers. This letter is being written to you our friends and customers and will be mailed to half a million people whom we hope will take advantage of the unusual listings that we have for you in this our SEVENTIETH ANNIVERSARY Catalog. You will find new things, rare things, and the good old varieties which we have featured for so many years.

As you know, Cliffwood Farms are our trial and proving grounds. Here under varied soil conditions we test the different varieties of seeds we sell, for germination, purity and trueness to type. We likewise test the seeds under sandy soil conditions in our greenhouses to assure you that the seed purchased will be of the highest germination. Likewise, in our electrical germinating machines, tests are made. These three tests and the unusual thoroughness with which they are made, provide for you insurance which should not be overlooked when purchasing your requirements. We term these three tests by the slogan "Triple-A-Tested" and you can buy with every assurance that the seeds will live up to your highest expectations.

We want you to join us in our SEVENTIETH ANNIVERSARY and if you will send us an order of \$1.00 or more, we will include a gift which we feel sure will be to your liking.

Wishing you a very prosperous gardening year, we remain, cordially yours,

SHADY PLACE MIXTURE

Not all grasses are grown successfully in shade or partial shade, and we have therefore prepared this mixture of fine leaved grasses that are naturally adapted for this purpose. We recommend sowing early in Spring, if possible before the ground is shaded to any great extent, using one pound to 150 square feet. If the ground has been densely shaded and is sour, it is well to apply some slaked lime as well as commercial fertilizer. Use 1 lb. to 150 square feet. Contains no timothy. 4527—½ lb., 26c; 1 lb., 47c; 2 lbs., 87c; 5 lbs., \$1.95, postpaid. Not prepaid: 10 lbs., \$3.60; 50 lbs., \$17.50; 100 lbs., \$34.00.

GRIDIRON GRASS MIXTURE

Build your lawn with Salzer's Gridiron Lawn Grass Mixture! Salzer's Gridiron Lawn Grass Seed is our finest mixture of various fine leaved grasses, including red top, fescues, blue grass, etc., in the right proportions, tough and strong, carefully blended to give one a strong, durable, luxurious and permanent lawn under trying circumstances. The great American game of football makes terrific demands upon the gridiron fields, and the name "Gridiron" suits this mixture admirably.

Sow one pound to every 200 square feet. Salzer's Gridiron Lawn Grass Mixture, of course, contains no timothy. 4539—½ lb., 28c; 1 lb., 50c; 2 lbs., 90c; 5 lbs., \$2.00, postpaid. Not prepaid: 10 lbs., \$3.70; 50 lbs., 18.00; 100 lbs., \$35.00.

SPECIAL LAWN GRASS MIXTURE

Not the most expensive, nor yet the cheapest, but the best general all around and all purpose Lawn Grass Mixture that we catalog, and the most popular. In addition to a carefully blended mixture of the best grasses, blue grass, red top, etc., Salzer's Special Mixture contains the proper percentage of Dwarf White Dutch Clover, always desirable for the lawn.

Customers should not be guided by price alone, in purchasing their lawn grass seed, but should also consider quality and the final results. An abnormally low priced mixture may be very apt to contain considerable chaff.

Sow the seed early, as soon as frost is out of the ground, to enable the young grass to get a good start before any weeds appear. Contains no timothy. Sow one pound to 200 square feet. 4529—½ lb., 23c; 1 lb., 39c; 2 lbs., 74c; 5 lbs., \$1.75, postpaid. Not prepaid: 10 lbs., \$3.20; 50 lbs., \$15.50; 100 lbs., \$30.00.

SALZER'S CLIFFWOOD EARLY WONDER WAX

The Sensation of Recent Years

Without question this is the most wonderful wax bean introduction of recent years, and the best for the market and the home garden. Belongs to the flat podded class and grows a strong plant eighteen inches high and two feet across. Plants are heavily loaded with pods five to seven inches long, flat, plump, meaty, and of a clear, handsome, waxy yellow color. Very tender, brittle, of fine texture and quality, and is the very earliest wax-podded bean. It is a bountiful yielder and bears for a long season; it is practically rustproof and it thrives and yields heavily in either a rainy season or in dry, hot weather. Appears to be absolutely unaffected by bad weather. Ready to pick in 35 days. If you have not as yet tried our New Early Wonder Wax, by all means give it a trial this season. You will not be sorry.

74—Pkg., 15c; ½ lb., 22c; lb., 39c; 2 lbs., 64c; 5 lbs., \$1.42, postpaid. Not prepaid, 10 lbs., \$2.00; 30 lbs., \$5.95; 60 lbs., \$11.50.

WARDWELL'S DELICIOUS WAX

It is a **10 CENTS** most vigorous grower, matures in 48 days, and produces heavy crops of long, showy pods, 5½ to 6 inches in length, and ½ inch broad, of a handsome golden yellow color. Tender, stout, straight and flat, fleshy, brittle and fine grained, fine flavor and almost stringless even when fully developed. Of strong, upright bush growth, 15 inches in height. Is a splendid shipper, and a great all around favorite on account of its large size, handsome appearance and excellent quality. It is an exceptionally brittle bean.

SELECT GOLDEN WAX

SALZER'S NEW STRINGLESS KIDNEY WAX

*Enormously Prolific, Stringless,
Meaty and Tender.*

10 CENTS
PKG.

This comparatively new variety, originated a few years ago by an Eastern grower, is a most valuable acquisition to the garden. Robust in growth, with long pods, entirely stringless, fleshy, and of superb quality. Plants are of erect bush habit, about 18 to 20 inches in height, and are most prolific. They are free from all diseases; even in wet seasons the foliage seems to be proof against blight, and the pods are always free from rust. Pods are fleshy, flattened in form, from 6 to 7 inches in length, $\frac{3}{8}$ inch thick, and $\frac{1}{2}$ inch broad, and of a rich lemon-yellow color. They are remarkable for their brittleness, exceptional flavor, and their absolute freedom from strings. Matures in 45 days.

Mrs. Rosa Schmiesing, Covington Pike, R. D. 13, Box 438, Dayton, Ohio, writes, "We have only a small garden but we always find your seeds good, and always find room for Salzer's New Stringless Kidney Wax Beans."

EDIBLE SOY BEANS

A Dish of Edible Soy Beans

EDIBLE SOY BEANS are the food of the future! The tremendous food value of soy beans has long been known but the difficulty has been to develop a variety that would cook and bake soft so as to be edible. On this, our Seventieth Anniversary, we offer for the first time, Edible Soy Beans!

The original seed was brought to the U. S. by Mr. Morse of the U. S. Dept. of Agriculture and was bred up and developed by Prof. Geo. M. Briggs of the University of Wisconsin and his associates. Matures in 85 days. Soy Beans are a substitute for meat; when green they are as good as fresh peas; cooked or baked, they taste somewhat like navy beans; roasted, they taste like peanuts. And they are of untold value for diabetics since

they are low in starch! Dried soy beans are classed among the 9 or 12 per cent vegetables, i. e., 9 to 12% is available carbohydrate. Green, they count as a 6% vegetable.

The seed we offer may also be used for immediate table consumption! They will cook or bake deliciously soft, using your navy bean recipes. As a health food, you should plant a few for the table and for canning. For various recipes, send 5c to the U. S. Dept. of Agriculture, Bureau of Home Economics, Washington, D. C., for Bulletin No. 726. Price: 4312—Pkt., 15c; 1/4 lb., 27c; 1/2 lb., 45c; 1 lb., 79c; 2 lbs., \$1.35; 5 lbs., \$2.95, postpaid. Not prepaid: 10 lbs., \$4.75; 25 lbs., \$11.50; 50 lbs., \$22.75; 100 lbs., \$45.00.

Among Soy Bean uses are ice cream, cheese, sandwich spreads, cookies, pie, salads, milk, bread, stuffed green peppers, and candy.—Mrs. J. F. Stoller, Norwalk, Wis.

and Darkest Red of
Any Beet.

Salzer's
Red
Beauty

Best for Canning

SALZER'S RED BEAUTY

Very early, uniform in size, perfect turnip shape, fine grained, tender, the richest and darkest red of any beet. Salzer's Red Beauty is a mighty good beet to plant and those who have once planted it, see to it that they have some of this fine strain in their garden every year. Its uniformity and its rich, attractive, dark red color sell the beets on sight at market, and for the home garden it not only produces tender, delicious, extremely early beets for table use, but the color is retained when cooked, making them most attractive for both canning and pickling.

Remarkable for its uniform, perfect shape; roots are always smooth, with but a small tap-root, are of medium size, flesh is finely grained, very sweet, always free from woody fibres, and the skin and flesh are the darkest red of any beet. The leaves are dark green and shaded with red, are very small and of upright growth, allowing close planting. A heavy cropper, maturing in about 40 days. 166—Pkg., 15c; oz., 20c; ¼ lb., 57c; ½ lb., \$1.00; lb., \$1.75, postpaid.

DETROIT DARK RED

Cannot be surpassed for main crop purposes. One of the largest beets grown and a heavy cropper, producing large, globe shaped roots, delicious, tender, and fine grained, small tap-root, and free from any trace of woodiness or stringy tendency. Succeeds equally well at all seasons and is one of the best to sow in spring to succeed the extra early and medium crop sorts.

The skin is an attractive blood-red and the flesh is dark red, practically zoneless. It is a popular variety for canning retaining its fine color exceptionally well. Leaves are dark green, shaded with red, tops are small and grow upright. The flesh is solid, always tender and of a decidedly sweet flavor. Matures in about 50 days. Most valuable for succession sowings. A great favorite, not only with market gardeners who grow for profit, but likewise with the home gardener. PRIZE
BEET

SALZER'S CHERRY BEET

We first offered Salzer's Cherry Beet in 1933, the memorable Chicago World's Fair year, as the Unknown Beet, and thousands planted it, to find it one of the nicest beets grown! **Salzer's Cherry Beet** is a small, early beet, maturing in 52 days and is especially fine for canning and pickling whole at 1¼ to 1½ inches in diameter. Roots are smooth, even in size and shape and almost perfectly globular. Tops and tap roots are very small. The flesh is an intense deep crimson, free from white zones, elegant in quality.

Yields heavily. While it is a splendid beet for canning, its attractive color and small uniform size make it ideal for daily table use. The flesh is so fine grained, so sweet and tasty, that it almost sets a new standard for beet quality! Fine for both home and market. 160—Pkg., 10c; oz., 16c; 2 oz., 29c; ¼ lb., 42c; ½ lb., 72c; lb., \$1.35, postpaid.

CROSBY'S EGYPTIAN

One of the most extensively grown of any variety of beets, by market gardeners. It is noted for its handsome form, small tops, very small tap-root, fine quality and quick, rapid growth. Roots

run uniform in size and shape, are rather flattened, turnip shaped, reach a good size, are tender and crisp. Flesh is an attractive dark red color with slightly lighter red zonings. Especially desirable for bunching for the early market. Takes on its turnip shape very early. Matures in 45 days. Also fine for the home gardener. We specialize in beet seed and we don't believe any better strains can be purchased.

158—Pkg., 5c; oz., 10c; ¼ lb., 31c; ½ lb., 58c; lb., 85c, postpaid.

SALZER'S EARLY WONDER BEETS

Its beautiful deep blood-red color, nearly globe-shaped root with almost no lighter zoning in the cross-section of the root, its small sized top and its smooth, clean, and small tap-root makes it a decided asset in the beet family. Matures evenly so that the entire crop may be gathered at one time. It is a very rapid grower, is very quickly in presentable market shape, and because of its early maturity, it can be sown outside as late as July. Matures in 44 days.

CLIFFWOOD GIANT
SWISS CHARD

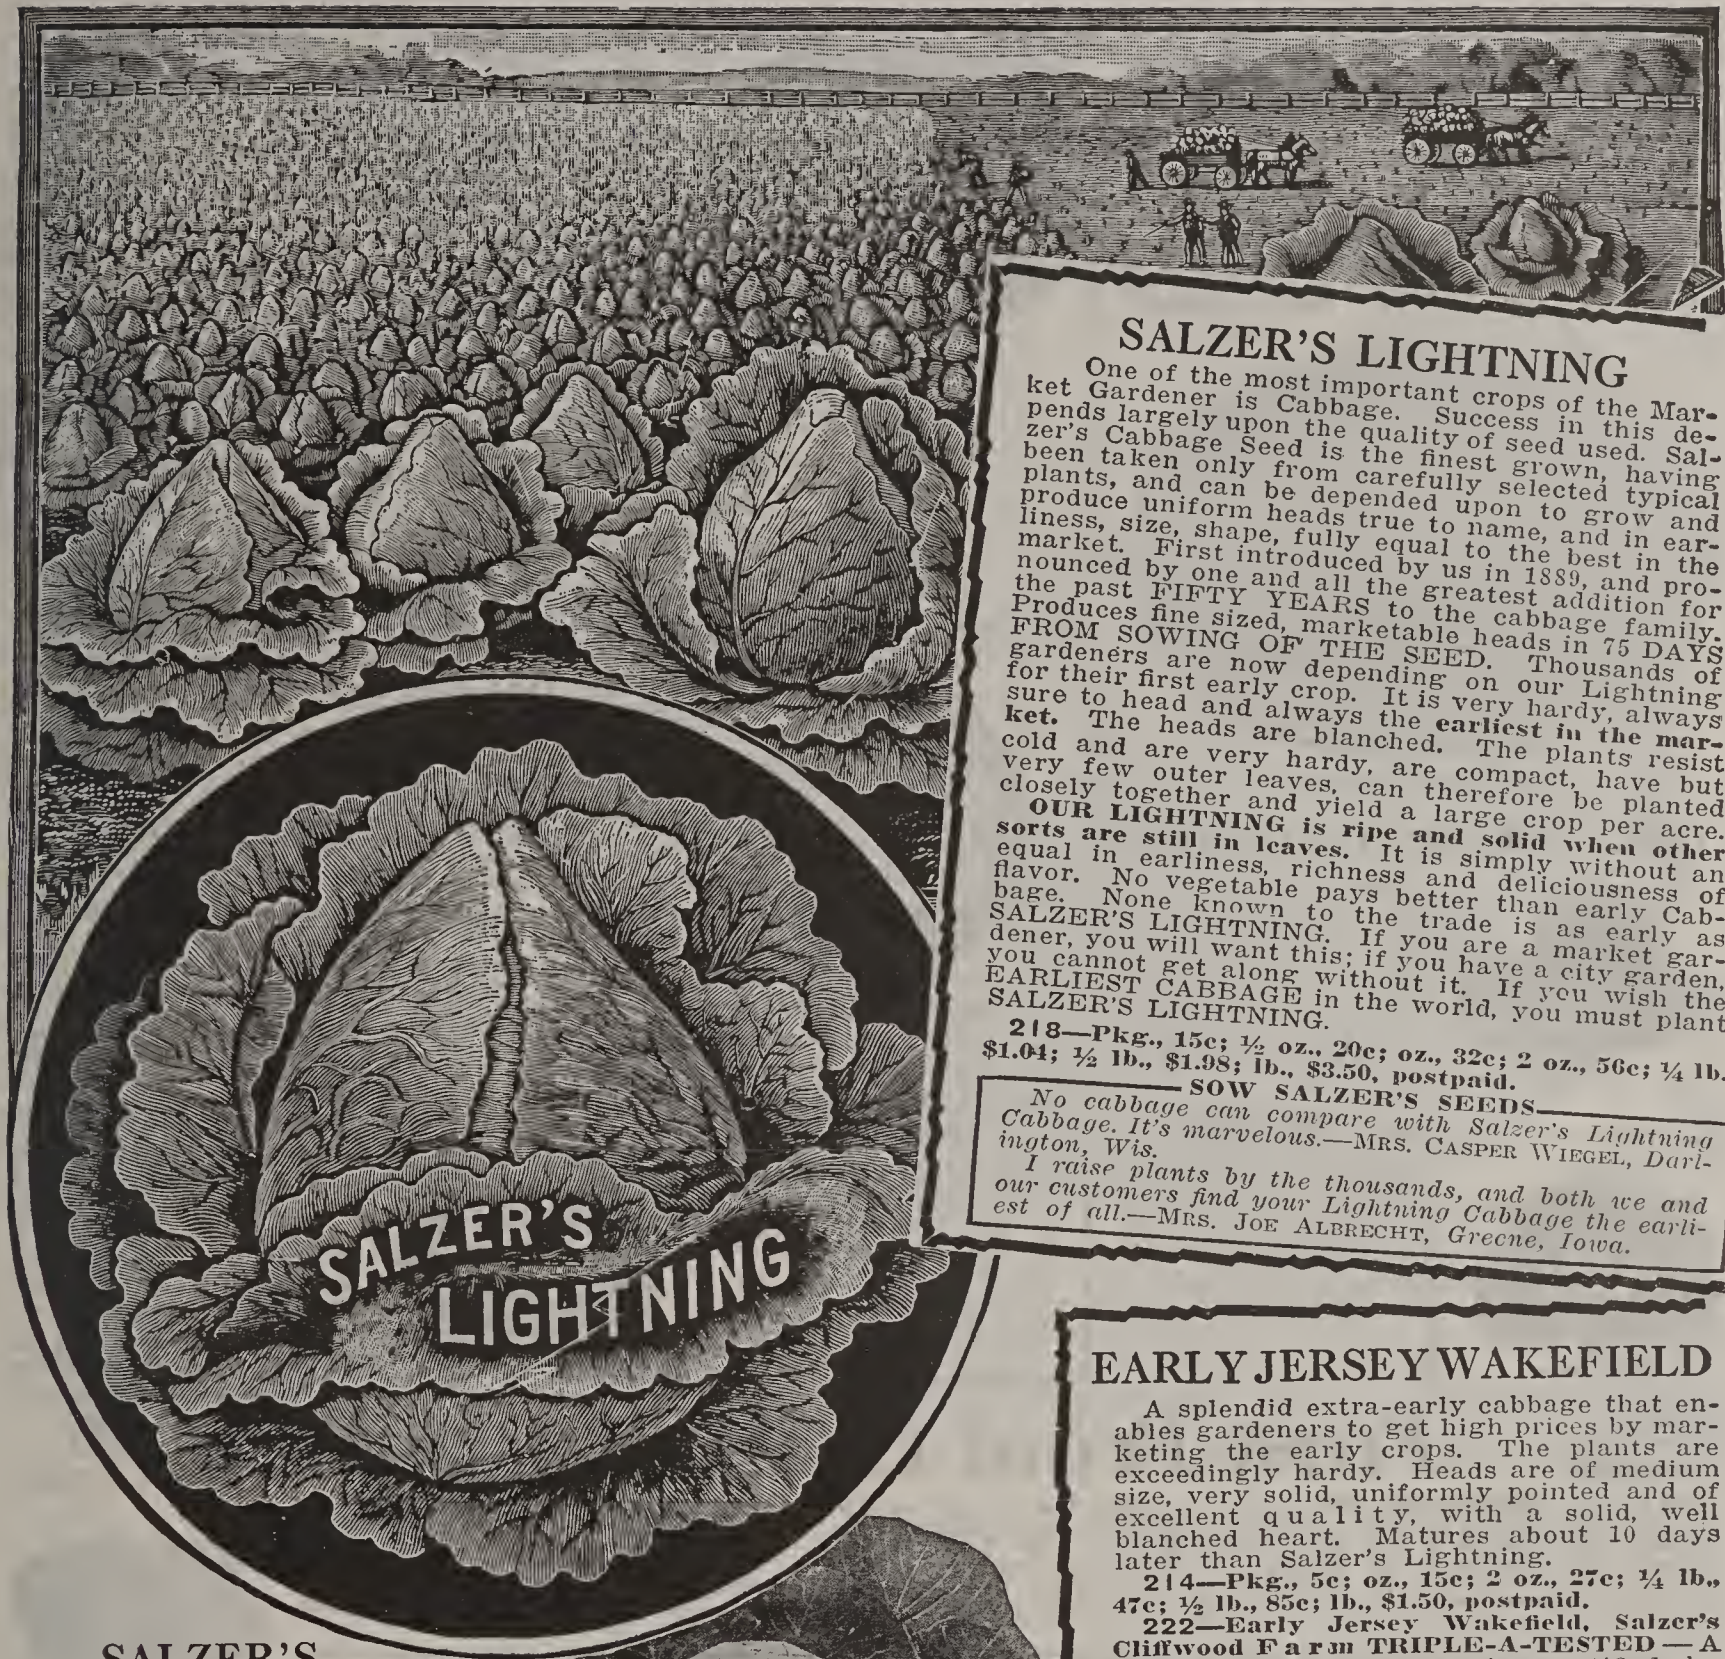

SWISS CHARD OR SPINACH BEET

Also known as Sea Kale. Is grown for its stalks and leaves, as it does not make a bulbous, edible root like the other varieties of beets. The leaves grow large and upright and as the outer leaves are cut, more come from the center. Yields a constant crop from July until winter, and can be used all summer when spinach is not available. The mid-rib or center stem of each leaf is large, broad, and white, and after trimming can be cooked and served like asparagus. The leaf part is cooked like spinach.

SALZER'S LIGHTNING

One of the most important crops of the Market Gardener is Cabbage. Success in this depends largely upon the quality of seed used. Salzer's Cabbage Seed is the finest grown, having been taken only from carefully selected typical plants, and can be depended upon to grow and produce uniform heads true to name, and in earliness, size, shape, fully equal to the best in the market. First introduced by us in 1889, and pronounced by one and all the greatest addition for the past FIFTY YEARS to the cabbage family. Produces fine sized, marketable heads in 75 DAYS FROM SOWING OF THE SEED. Thousands of gardeners are now depending on our Lightning for their first early crop. It is very hardy, always sure to head and always the earliest in the market. The heads are blanching. The plants resist cold and are very hardy, are compact, have but very few outer leaves, can therefore be planted closely together and yield a large crop per acre. OUR LIGHTNING is ripe and solid when other sorts are still in leaves. It is simply without an equal in earliness, richness and deliciousness of flavor. No vegetable pays better than early Cabbage. None known to the trade is as early as SALZER'S LIGHTNING. If you are a market gardener, you will want this; if you have a city garden, you cannot get along without it. If you wish the EARLIEST CABBAGE in the world, you must plant SALZER'S LIGHTNING.

218—Pkg., 15c; ½ oz., 20c; oz., 32c; 2 oz., 56c; ¼ lb., \$1.04; ½ lb., \$1.98; lb., \$3.50, postpaid.

The Grandest, Best Keeping, Surest Heading, Large Cabbage in the World

For almost half a century this grand cabbage has held absolute sway as the undisputed leader of all late flat cabbages. So famous and well-known has it become, that it is not an uncommon occurrence for stores to give the preference to market gardeners who can furnish them with these large, solid, heavy cabbages. It is surprising how many of the retail customers insist upon purchasing only Salzer's Giant Flat Dutch Cabbages for their winter use. They know that its flavor, quality, and tenderness is unequalled by any other variety.

Always In Great Demand

On the city markets, the attractive, fine appearing heads sell themselves to thrifty purchasers. The home gardener who once plants this superb variety, finds it so far superior in every respect to any other late sort that he has ever tried, that where Salzer's Giant Flat Dutch has once gotten a foot-hold in a garden, it has never been supplanted by other varieties, but is sown year after year. Unsurpassed in quality and taste, sureness of heading, weight, size, attractiveness, far superior for sauerkraut and slaw. Once planted, always planted. Pronounced everywhere to be the greatest late flat cabbage ever introduced, and the finest of any in existence.

A Sure Header

For sureness in heading and regularity in growth, SALZER'S GIANT FLAT DUTCH certainly heads the list. Heads are 12 to 14 inches in diameter, averaging 18 to 20 pounds in weight. It forms every time, very large, very hard, solid heads, crisp, tender, sweet, uniform in shape, color and handsome appearance. It has a very short stem, is a very compact grower, forms few loose leaves, which

turn in the head and if planted closely will yield enormous crops. Reports of 999 marketable heads from 1,000 plants set out are of frequent occurrence. It keeps well until late in Spring and is good for shipping. There are many magnificent strains of Cabbage Seed offered in this catalogue, but we think we can safely say that SALZER'S GIANT FLAT DUTCH is equaled and surpassed by none.

Price of Salzer's Giant Flat Dutch Cabbage: 250—Pkg., 15c; ½ oz., 22c; oz., 32c; 2 oz., 55c; ¼ lb., \$1.00; ½ lb., \$1.95; per lb., \$3.50, postpaid.

Salzer's Earliest Coreless Carrot

A PRIZE WINNER

The peer of all carrots—the grandest carrot in cultivation! Market gardeners, if you want highest, top-notch prices, you must plant Salzer's Earliest Coreless Carrot. Home Gardeners, if you want to have carrots that will be a real treat for your own table use, carrots that you will take pride in showing to your neighbor, you must plant Salzer's Earliest Coreless. A carrot that is in a class all by itself, and has been ever since it was introduced by us over thirty-five years ago.

As in all else, Salzer's Earliest Coreless Carrot reigns supreme in the carrot world. Those who once plant it never discard this incomparable strain. Those who have never planted it, are missing a real treat. Our Earliest Coreless will demonstrate what splendid flavor, what tenderness, what attractive color, what lusciousness, what symmetry, can be bred into carrots. When planting seeds, the best is none too good. It is the cheapest in the end as everyone knows, and whenever you go out in the garden to get some carrots for dinner, you will be mighty glad that you planted Salzer's Earliest Coreless this spring.

It is a distinct variety. It is exceptionally uniform in shape, of fine texture and entirely free of any heart and is very early, maturing about 2 weeks ahead of all other half long sorts, although fully as productive as any of them, the roots usually measuring 6 to 7 inches in length and 1½ inches through.

Salzer's Earliest Coreless in shape and color is one of the most handsome of Carrots. The roots are of cylindrical form, blunt at the end, very symmetrical, smooth skin, fine neck and small top. The color is a beautiful red, brighter and deeper than that of any other Carrot. It is a color that will draw the attention of the buyer on the market.

But the greatest feature of this new variety is the entire absence of the stringy, coarse heart or core found in all other Carrots. It is of most delicious quality and owing to the fine texture of the red flesh and its tender, delicate flavor, Salzer's Earliest Coreless is called the sweetest of all Carrots by all those who have tasted it.

EMPEROR
CARROT

RED CORED CHANTENAY

The beautiful, rich, orange-red core is the one outstanding feature of this superb Chantenay carrot! A stringy yellow core in carrots has always been objectionable.

Sliced or diced, Salzer's Red Cored Chantenay makes a beautiful dish. The roots measure about six inches in length, they are very thick, free from large eyes and side rootlets, medium early, and run very uniform in shape, with medium sized tops, making them ideal for bunching. The flesh is tender, sweet and juicy, but the greatest feature is the tender, delicate, handsome rich red core, with no trace of yellow, and of almost the same shade as the attractive, tender orange-red flesh itself. Medium early in maturity, yields heavily. These carrots always command highest prices.

307—Pkg., 5c; oz., 10c; 2 oz., 16c; ¼ lb., 24c; ½ lb., 44c; lb., 75c, postpaid.

310—Red Cored Chantenay, Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain certified by THREE-WAY tests: Pkg., 10c; oz., 14c; 2 oz., 25c; ¼ lb., 38c; ½ lb., 64c; lb., \$1.10, postpaid.

Flesh is red, sweet, and almost entirely devoid of core. 308—Pkg., 9c; oz., 13c; 2 oz., 22c; ¼ lb., 38c; ½ lb., 59c; lb., \$1.00, postpaid.

MORSE'S BUNCHING

A cylindrical, half-long carrot, of ideal size and shape for bunching for market, but like all the other varieties listed, elegant for the home garden. Deep orange color, small indistinct core, fine grained flesh, small neck and short tops, ships well. 311—Pkg., 10c; oz., 13c; 2 oz., 22c; ¼ lb., 38c; ½ lb., 59c; lb., \$1.00, postpaid.

SALZER'S SELECT OXHEART

Also known as Guerande. The best and most popular of the short, thick-formed carrots. It is a heavy yielder and because of its shape it is highly desirable for heavy soils. The roots are about 5 inches long, 3½ to 4 inches wide at the shoulder and taper down to a 2-inch stump-rooted bottom. Of the finest quality for table use, very free from any hard core, and both skin and flesh are rich orange colored.

302—Pkg., 5c; oz., 10c; 2 oz., 16c; ¼ lb., 24c; ½ lb., 44c; lb., 75c, postpaid.

MASTODON

Field carrots are of high nutritive value and are also a sort of tonic, keeping the stock in good condition. The wise dairyman will feed carrots to his cows.

Salzer's Mastodon Field Carrot is the most productive variety and is easily harvested. It is of creamy white color with a green crown. Roots are smooth, 8 to 10 inches long, about 3 inches broad, and taper gradually to the bottom. The flesh is white and very nutritious. SALZER'S SUPER SNOWBALL

A superior strain, well named as Super, of Salzer's Early Snowball Cauliflower, about 5 days later but having a larger and heavier head. The immense heads have smooth, solid, snow white curds very compact and of best quality, and the crop matures nearly all at one time. Salzer's Super Snowball surpasses all others in heaviness and uniformity of maturity and is ideal for forcing under glass. Unequalled for either the home gardener or the critical market gardener.

SALZER'S EARLIEST SUREHEAD

IT HEADS WHERE OTHERS
FAIL

Grandest of all! Whether for forcing or open ground, planted early or late, it is the best, surest header of all. It is particularly desirable for forcing under glass. On our trial grounds every plant produced a **SUPERB HEAD AND SURPASSED ALL OTHER VARIETIES OF EQUAL SIZE IN EARLINESS AND QUALITY.**

The plants are of strong growth with erect, dark green, pointed leaves growing closely about the heads, which are pure snowy white, with very close and compact curds of wonderfully fine quality. The heads are of large size, often reaching 10 inches or more in diameter.

This sureness of heading is highly essential to the market gardener and just as necessary for the home gardener. To make the best heads, cauliflower plants need cool, moist weather, good soil and thorough cultivation. Salzer's Earliest Surehead matures in about 95 days and is a sure header.

317—Pkg., 18c; 1/4 oz., 49c; 1/2 oz., 85c; oz., \$1.50; 2 oz., \$2.85; 1/4 lb., \$5.50, postpaid.

SALZER'S FIRST CROP

A new, distinct, and extremely early variety. A splendid market gardener's variety, with stone-hard, snow-white heads.

Being of dwarf, compact growth, with but a small number of leaves, it is an ideal Cauliflower for forcing during winter and spring. Severe tests have proved it absolutely certain to head when conditions are ordinarily favorable, and also most uniform in growth, type and maturity, the crops being taken off almost clean at the first cutting. One characteristic of this novelty is the close sitting together of the leaves, enfolding the head tightly and causing the inner leaves almost to cover the flower, thereby avoiding the necessity of early tying up.

The heads are very beautiful, solid, snow white, of medium size, which will find a ready sale at the highest prices everywhere and will never fail to be appreciated.

321—Pkg., 14c; 1/4 oz., 70c; 1/2 oz., \$1.25; oz., \$2.25; 2 oz., \$4.00; 1/4 lb., \$7.50, postpaid.

DRY WEATHER OR DANISH GIANT

Produces stone-hard and snow-white heads, unsurpassed in quality, which average larger than those of the Salzer's Surehead, but are a week later. The foliage is very heavy, fully protecting the heads, which are less liable to blight in hot weather than those of the earlier sorts. As indicated by the name, for dry, hot climates it is to be

preferred to all other sorts, being a sure header there when other sorts fail. Even in the driest weather, it is of a vigorous growth.

316—Pkg., 15c; 1/4 oz., 48c; 1/2 oz., 84c; oz., \$1.55; 2 oz., \$2.85; 1/4 lb., \$5.50, postpaid.

CELERY

SALZER'S WONDERFUL

Salzer's
Wonderful

Also called Golden Plume! Earliest in maturity, superior eating quality, increased size, beautiful golden color, superior keeping qualities, marked resistance to rust and blight,—these are the outstanding characteristics of this superb celery.

Salzer's Wonderful produces fine stocky plants with large, broad, thick stalks that blanch easily and quickly to a beautiful clear waxen yellow. They are solid, crisp, brittle, tender, of a much superior flavor and quality, and are entirely free from stringiness of any kind. Trials at Cliffwood Farms prove it to be the very earliest celery. This extra earliness spells top prices for the trucker, and the earliest, most delicious, crisp and beautiful celery for the home gardener's table use.

The plants are remarkably resistant to blight and rust, a factor of great importance.

345—Pkg., 10c; ½ oz., 25c; oz., 40c; 2 oz., 72c; ¼ lb., \$1.25, postpaid.

GOLDEN SELF-BLANCHING

The ribs are thick, broad, fleshy and the hearts large and solid. As the plants mature, the inner stems and leaves turn to a beautiful golden yellow. Blanches easily, quickly, and perfectly.

It is planted very extensively and owing to its handsome, waxen-yellow color, its superb quality, entire freedom from stringiness, crispness and tenderness and its delightful, rich nutty flavor, this variety is very popular and one of the leading varieties in many markets.

333—Pkg., 10c; oz., 27c; 2 oz., 48c; ¼ lb., 85c; ½ lb., \$1.65; lb., \$3.00, postpaid.

SALZER'S SELF BLANCHER

Thick, Heavy Stalks, Silvery White

Salzer's Self-Blancher has been bred from the White Plume, over which it is a great improvement. It blanches more readily, is earlier, grows more stalks, is heavier and is a much better keeper than the older variety.

Next to Salzer's Wonderful it is the earliest celery than can be grown. It is of compact habit, with light green foliage, stalks are thick and solid, unusually meaty, of a delicious rich flavor, pure white, heavy, tender and crisp. As it keeps so well, it is widely grown for winter use. 334—Pkg., 15c; oz., 39c; 2 oz., 72c; ¼ lb., \$1.19; ½ lb., \$2.20; lb., \$4.25, postpaid.

UTAH SPECIAL The Best Green Celery

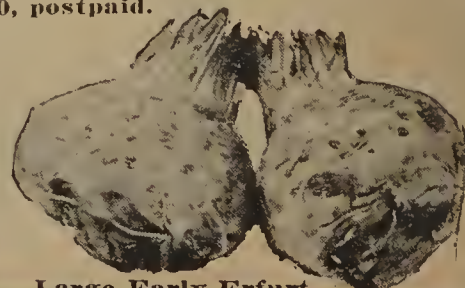

Also known as Salt Lake and Utah Winter Celery. The stalks are large and the heart is well developed, with practically no soft stalks, which is unusual with green celery. Salzer's Utah Special blanches quickly to a beautiful pure white, very crisp, brittle, and is of a rich nutty, superior quality. It keeps very well and we highly recommend it for winter use; it is very solid and very free from strings. 346—Pkg., 8c; ½ oz., 24c; oz., 43c; 2 oz., 77c; ¼ lb., \$1.45; lb., \$2.75, postpaid.

TURNIP ROOTED CELERY OR CELERIAC

Differs from other celery in that the roots are cultivated for use instead of the tops. Used for soups and salads, or boiled like Parsnips. It has a rich, meaty, distinct celery flavor. Keeps well.

LARGE EARLY ERFURT—This early variety is ready for use in June, if planted early. Flesh is pure white, very tender, not woody, and of finest quality. 351—Pkg., 10c; oz., 20c; 2 oz., 35c; ¼ lb., 59c; lb., \$2.00, postpaid.

Salzer's Independence or 4th of July Corn

The Largest Eared, Heaviest Yielding, Extra Early Sweet Corn

Our sales of this Sweet Corn have been enormous and are increasing from year to year. Our supply, although always larger than that of the preceding year, generally has been exhausted before the end of the season. We do not hesitate to say now that more of Salzer's Independence Corn has been planted all over the country in the last few years than of any other extra early sort.

Comparative tests made in our trial ground prove Salzer's Independence far superior in size, productiveness and delicious quality to any other first early variety; the many testimonials we have received, a few of which are printed here, show the satisfaction this corn has given wherever used.

The vigorous stalks grow about five feet high and frequently produce two fine long ears, 10 to 12 rowed, and about 10 inches long, which are very symmetrical and handsome. The grains, which are tightly set, are large, deeper than broad, very white, and are of an exquisite fine quality, usually found only in the later sorts. Quite often reports have reached us of ears of our Independence Corn having been in edible condition in 45 to 50 days from planting the seed, and if sown in the fore part of May in our section in a favorable season, luscious ears of this variety should surely be ready for the table by **July the 4th.**

Salzer's Independence or Fourth of July Corn, an introduction of ours of over a quarter of a century ago, yields first place to none for extreme extra-earliness, and is the

earliest white sweet corn grown. It is the **LARGEST EARED** and **HEAVIEST YIELDING EXTRA EARLY SWEET CORN**, bar none. A great seller at market. **Sixty days from planting** one should pluck mature sweet corn, so that at your Independence Day dinner you can serve sweet, luscious, tender, finest quality corn on the cob—ears 10 inches and more in length, each having 10 to 12 rows, symmetrical, handsome, and with nicely rounded, rather blunt, tips.

Mr. D. D. Millinger, Kinderhook, Ill., writes, "We have planted Salzer's Independence Corn for a number of years, and this year had our first sweet corn on June 27." Mr. Chilton E. Downing, R. D. 8, Lexington, Ky., writes, "I planted your Independence Sweet Corn and it did remarkably well." Mrs. Arnie G. Watkins, R. D. 1, Coweta, Okla., writes, "Your Independence Sweet Corn sure was fine. We had beautiful ears before anyone thought of having corn for the market." Mr. A. Muellenbach, R. D. 3, Fond du Lac, Wis., writes, "Planted your 4th of July Sweet Corn on June 24 and had our first ripe ears on August 5. Our neighbors asked where we secured the seed."

SAL-

ZER'S

Honey Boy—

Unusually early, unusually sweet, high in sugar content, handsome, attractive, tender and juicy. Salzer's Honey Boy is popular with the market gardener, as maturing in 55 days in this northern climate, it enables him to get the first edible sweet corn to market and to reap the consequent high prices. Popular with the home gardener as it enables him to grow delicious, melting quality sweet corn for his table in an astonishingly short time.

Honey Boy Is a Desirable Extra Early Corn

Developed for a short season, it is one of the best extra early sweet corns for any district and especially for the entire Northwest. Like all extra-early varieties, the stalks are slender and grow 4 to 5 feet high, and the ears are about sixteen inches above the ground. Being a free stooler, it shoots up many stalks, hence is a heavy yielder. Ears are straight and uniform, handsome, nicely rounded at the tips, average 7 inches in length and contain 12 to 14 rows of creamy white, fat, plump, sweet and delicious kernels.

Price of Honey Boy: 366—Pkg., 11c; lb., 35c; 2 lbs., 56c; 5 lbs., \$1.19, postpaid. Not prepaid: 10 lbs., \$1.60; 25 lbs., \$3.85; 50 lbs., \$7.45.

GOLDEN SUNSHINE

Stalks are 4½ feet high, usually carrying 2 or more fine ears about 7 inches long which are 12-rowed and packed with broad, deep, rich golden yellow kernels of the most sugary, tender and luscious quality that has ever been produced. Matures in about 65 days. Whether for your own garden or for the market, don't fail to plant it this spring.

Anyone who sells at market, knows the premium the good housewives pay for the extra-early supplies of cabbage, lettuce, sweet corn, tomatoes, etc. Every gardener we know, who planted Golden Sunshine last year, has definitely and positively determined upon a larger planting this year.

Every home gardener who planted it, remembers with satisfaction the early date at which the delicious, juicy, tender, sugary cobs of golden corn were served steaming hot at the table! Golden Sunshine does well in all sections of the country! **406—Pkg., 5c; ½ lb., 18c; lb., 30c; 2 lbs., 52c; 5 lbs., \$1.10, postpaid. Golden Gem is eight rowed; kernels are quite deep, broad, meaty, rich golden yellow, very tender and of the sweetest and most sugary flavor imaginable. Resistant to Stewart's Wilt! During the past few years, sweet corn growers have suffered enormously heavy losses from Stewart's Disease or Wilt. The only remedy is disease-resistant seed and Purdue Cross Golden Bantam has been giving remarkably large yields on badly infected soil! It is proving a big boon wherever sweet corn growing has been impossible the last few years. Purdue Cross Golden Bantam was developed by Prof. G. M. Smith of Purdue University.

The ears are about eight inches long, beautifully uniform in size and shape, and having from 10 to 14 rows. The thick, sugary kernels of Purdue Cross Golden Bantam are tender and sweet, meaty, of finest quality, and of a beautiful golden yellow color. **FINEST CUCUMBER
INTRODUCTION IN YEARS!**

Retaining its attractive deep green color for as long as two months, ripening in 50 days, yielding heavily—Salzer's Evergreen Cucumber is without a peer! Salzer's Evergreen originated with the well known Mr. William E. Vail, Yorktown Heights, New York, who has been the introducer of several fine new tomatoes. Ideal for home or market! Salzer's Evergreen Cucumber stays green for an unusual length of time, which is an important factor with the home gardener as well as the trucker.

Friends Praise It

In 1933, the long to be remembered year of Chicago's Century of Progress, we offered Salzer's Evergreen Cucumber for the first time, in only small quantities, to several friends and customers. Almost without exception, from the most conservative to the most enthusiastic, it was proclaimed one of the best slicers, one of the best for pickles, one of the best for firmness of flesh, one of the best for quality, for fine grained flesh, for satisfactory yield, and to crown it all, it astonished everyone with its remarkable ability to retain its beautiful and attractive deep green color for from five to eight weeks, looking just as green and vigorous as when first picked. Salzer's Evergreen marks a new era in Cucumbers.

Commands Top Prices At Market

Its handsome appearance instantly attracts the eye and market gardeners everywhere have been able to get the highest prices with Salzer's Evergreen Cucumbers! And, it prolongs the selling season. You too can bring attractive deep green cukes to market, weeks after the local supply has normally disappeared, and enjoy a brisk trade. Salzer's Evergreen is a smooth, spineless, dark waxy green sort about 10 inches long by 3 inches in diameter, tapering only slightly towards each end and rounded abruptly at both ends. Flesh crisp white and few seeds.

Mr. Russell B. Linkey, Mansfield, Ohio, writes, "We were well pleased with the way Salzer's Evergreen Cucumber stayed green. It is marvelous." Mr. James Chop, R. D. 1, Box 53, Ravenna, Nebraska, writes, "I always like all your seeds and plants. Salzer's Evergreen Cucumber is the greatest for keeping its color that we have ever seen." It is a great slicer and makes elegant pickles.

CUCUMBERS FOR PICKLES

SALZER'S PROLIFIC PICKLE CUCUMBER

Plant Salzer's Prolific and Pick Basketsful of the Finest and Best Cucumbers for Pickling

Does it pay to plant Salzer's Northern Grown Seeds? Mrs. M. H. Keating, Box 195, De Smet, South Dakota, writes, "Your Prolific Pickle Cucumber bore so heavily that we hardly knew what to do with them." Think of such returns as that!

Salzer's Prolific Pickle is the one unbeatable pickling cucumber, it is enormously productive, it is uniform, it is a splendid shipper, it is early, it is of wonderfully fine quality. Housewives purchase it at market in preference to any other.

Slender, cylindrical, with large prominent spines, color dark green. Measures about 5½x2¼ inches, and has square ends, making it very attractive. The flesh is solid and thick in texture, and excellent in quality. The vines set fruit when young and usually continue to bear longer than any other variety. Matures in about 55 days. Mrs. Lyman F. Marvin, Spragueville, Iowa, writes, "Never raised such crops of cucumbers as with your Prolific Cucumber. We sold lots of them." Gardeners always make huge profits with Salzer's Prolific Pickle. SALZER'S EARLIEST

Lettuce

SALZER'S EARLIEST LETTUCE

**EARLIEST CURLED OR LOOSE LEAVED
LETTUCE. DELICIOUSLY CRISP AND
TENDER, EASIEST TO GROW**

Yields an abundant crop of attractive light green leaves, heavily curled, of remarkably crisp texture, and of the finest flavor. The quality and flavor even of the outside leaves is fully equal to if not better than, the tender heart leaves of many heading varieties. Salzer's Earliest is the most widely planted in all sections of the country, and especially in the great West. It is such a strong grower that it thrives everywhere.

It is an admirable variety for outdoor planting, especially in early spring and it is also most suitable for greenhouse forcing. It is the lettuce for planting all summer long. Extremely popular for winter markets. The lower leaves grow clear of the ground so that it rarely suffers from rot. It is an ideal shipper and will prove most profitable for the grower, whether he sows seed in a hotbed or out of doors. It is the best non-heading lettuce for the home garden. Salzer's Earliest Lettuce affords crisp, tender, attractive, finest quality leaves long before the heading sorts have commenced to close up.

540—Pkg., 15c; oz., 21c; ¼ lb., 62c; ½ lb., \$1.13; lb., \$1.95, postpaid.

SALZER'S PRIZEHEAD LETTUCE

Is one of the best and most reliable varieties for all-year-around cultivation. The name is a trifle misleading, as it is a loose leaved or curled variety, and does not make a head. Plants form a loose cluster of leaves which are exceedingly tender, quite blistered and crumpled, sweet, crisp, and are of light brown color varying to a medium green base. It is one of the best home garden varieties as it grows quickly and makes a lot of good eating leaves which are of remarkably good flavor. Salzer's Prizehead reaches a very large size without losing its tenderness or crispness. 575—Pkg., 5c; oz., 9c; ¼ lb., 28c; ½ lb., 50c; lb., 85c, postpaid.

545—Prizehead, Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain certified by THREE-WAY tests: Pkg., 10c; oz., 14c; ¼ lb., 39c; ½ lb., 74c; lb., \$1.35, postpaid.

BLACK SEEDED SIMPSON

One of the standard varieties. A non-heading, curled, bunching, crisp variety, attractive light green color. It reaches a large size, grows quickly, is early, of fine quality, tender and sweet, and thrives splendidly during the hot summer months. Easily grown by the home gardener and much used by market gardeners for hot bed culture.

SOW SALZER'S SEEDS

This is the third order this spring, that we are sending you. Everything has been fine.—Mr. S. Raymond Jameson, Leland, Illinois.

SALZER'S CRISP AS ICE

A beautiful lettuce of medium size and medium early. Salzer's Crisp As Ice is a cabbage butter head lettuce, the leaves having a rich, attractive, deep green base, and upper portion covered with dark brown, giving the plant a deep brown or bronze appearance. A cool weather variety, valuable for both early spring and fall.

This head lettuce, when cut open has such a rich, creamy heart, and is so tender and brittle, that when it was introduced in about 1894, it was immediately and rightly named Crisp As Ice. It enjoys a wide popularity and is extensively grown. We recommend Salzer's Crisp As Ice unreservedly for the home gardener. Mrs. Walter Strecker, Sherman, Oklahoma, writes, "Your Crisp As Ice Lettuce is the best of all. I think all of your seed is hard to beat."

CLIFFWOOD SUMMER HEADER LETTUCE

A superb new lettuce that we introduced in 1927. For years we had been working to develop a lettuce that would form solid heads despite hot weather, a thing which has hitherto been almost impossible. We finally developed this grand new strain which heads during the heat of summer! In severe tests on our great Cliffwood Farms, practically every plant formed a fine, firm, solid head of butterhead lettuce of the finest flavor, despite very hot weather.

The leaves are light green, crumpled, thick and tender, blanching to creamy white in the center of the head. Heads are large, about 8 to 10 inches in diameter, they have a delicious rich, buttery flavor, and they are the last to go to seed. It stands heat better than any other variety, without wilting. Be sure to give it a trial this year. 577—Price of Summer Header Lettuce: Pkg., 14c; oz., 26c; ¼ lb., 79c; ½ lb., \$1.50; lb., \$2.50, postpaid.

The heads range from 16 to 18 inches in diameter and weigh from 3 to 3½ pounds each.

The heart is beautifully blanched, creamy white, crisp, tender, and free from any trace of bitterness. It is robust and is a standard hot weather variety. **565—Pkg., 5c; oz., 15c; ¼ lb., 47c; ½ lb., 85c; lb., \$1.50, postpaid.**

SALZER'S IMPROVED HANSON

Exceptionally early, large globular, crisp heads which are firm and well blanched. The leaves are broad, crumpled and twisted, of light green color, never spotted or brownish. It is of very sweet flavor, and succeeds everywhere and at all times. Heads well during hot weather. Mrs. Wm. Spreadboro, Paken, Alberta, Canada, writes, "Some of the finest vegetables I have ever seen in Alberta were grown from your seed. Your Improved Hanson Lettuce is of especially fine quality."

PARIS WHITE COS LETTUCE

The Cos Lettuces are distinguished from other lettuces in that their leaves are elongated and almost always somewhat spoon-shaped. They are grown in exactly the same way as other lettuce. When young, the leaves are pale green. When full grown, they form a loose, conical head, outer leaves light green and rather crimped, inner leaves very pale green with the midrib white and very prominent. Very crisp and has a delicious flavor.

Succeeds very well everywhere, never wilts under the severest sun and can be grown to an immense size; plants weighing six pounds have been grown of this variety.

598—Pkg., 9c; oz., 14c; ¼ lb., 38c; ½ lb., 70c; lb., \$1.25, postpaid.

CHINESE OR CHICKEN LETTUCE

You have doubtless often read that lettuce is an excellent feed for chickens. In this new variety you will find a feed that yields more than other green feeds, and that is much preferred by poultry. When Salzer's Chicken Lettuce is cut, it grows rapidly again, and may be cut again and again. The yield is extremely heavy; grows 3 to 4 feet high and does not form a head. For table use, it perhaps will be found too coarse. If you have any chickens, by all means sow some this year. It will be the best investment you can make.

SALZER'S EARLIEST RIPE MUSKMELON

10 CENTS
PKG.

Earliest of All. Our attention was called to this Melon many years ago by a market gardener near La Crosse, who for the past years has always had Muskmelons from 8 to 15 days ahead of his neighbors. These Melons were of uniform size, of fine shape and appearance, yellow fleshed, extremely delicious, and sold readily in our markets from \$1.25 to \$2.00 per dozen, the profit to an acre being something enormous, as all the Melons were usually sold before other sorts came into the market.

THIS IS THE EARLIEST YELLOW-FLESHED MUSKMELON that we know of, being ready for the market in about 60 days after planting. It is of oval shape, as may be seen by the illustration, of good size, about five inches in diameter, with fairly distinct ribbing, heavily netted. The flesh is exceptionally thick, of a rich salmon-yellow color, sweet, luscious and melting, and the flavor is unsurpassed by that of any other variety. The vines are robust and vigorous, resisting blight to a marked degree. Salzer's Earliest Ripe is a distinct variety and should not be confused with other sorts. Mr. Arthur J. Sharp, R. D. 2, Box 153, Preston, Maryland, writes, "My Earliest Ripe Muskmelons did just wonderfully well; in fact, I had the best muskmelons in this part of the country." Mr. Sandy Scrimger, Charles City, Iowa, writes, "Your Earliest Ripe Muskmelons are the best I ever raised. Had a fine crop." It is an enormous cropper, bearing for a long time. If you want to make money on Earliest Melons there is no other variety in the wide world that you can plant that will give quicker returns than SALZER'S EARLIEST RIPE MUSKMELON. 606—Salzer's Earliest Ripe Muskmelon—Pkg., 10c; oz., 19c; ¼ lb., 60c; ½ lb., \$1.10; lb., \$1.95, postpaid.

SALZER'S SUGAR ROCK MUSKMELON

7 CENTS
PKG.

A Type of Muskmelon That Is Creating a Sensation! Also Known as Honey Rock!

Salzer's Sugar Rock is one of the most prolific melons on the market today. It is strikingly attractive and distinct from all other sorts. Fruits are oval, of good large size, without ribbing and heavily netted. Matures in about 80 days.

Four characteristics describe this melon perfectly: **productiveness, striking appearance**, which always commands attention at market, **quality**, which backs up the appearance, and **ability to stand shipping and handling**. Market gardeners, these melons sell at fancy prices; customers want them! Home gardeners, these melons will make your garden the envy of the neighborhood! The flesh is deep and thick, orange color, with a sugary and luscious flavor that is unequalled today. It is so aromatic that one melon, uncut, will scent a room with its delightful, sugary, muskmelon odor.

The outside rind is light golden yellow overlaid with heavy gray netting, and is so tough that ripe melons may be picked and then shipped a long distance and arrive in good condition. Salzer's Sugar Rock is not a Rockyford type, being earlier and about one-half larger in size. It is an entirely distinct melon! Vines are strong and vigorous and do not show any trace of blight.

Mrs. Heurshel Layman, Herman, Nebr., writes, "We plant Juicy Fruit Melon every year as we found it to be the best." Mrs. William Oldham, Neillsville, Wis., writes, "Our patch of Juicy Fruit Melons is just grand."

The skin is an attractive light green, the fruits reach a very large size, they are nearly round with slight sutures, and the thick salmon colored flesh is the sweetest, the most luscious, the most sugary flavored, that we have ever eaten. I found Salzer's seeds and plants the best we ever had. The seeds never refuse to grow and all the plants are so healthy.

Among large onions, Salzer's Prizetaker always attracts attention by its fine size and great beauty. It is of the same type as the large Spanish onions that have been imported and sold at high prices. Plant Salzer's Famous Prizetaker this year and see what splendid size, what perfect symmetry, what delicious mildness, what fine even grain, what productiveness, what all-around attractiveness has been developed and bred into this onion at Cliffwood Farms. No need for the large Spanish onions only to sell at high prices. They cannot be distinguished from Salzer's Prizetaker, and Salzer's Prizetaker is even more superior in delicious flavor and fine appearance. It always sells at sight and at high prices—seldom for less than 5c per pound. In addition, Prizetaker comes in at a time when other onions are scarce, so the price is always high. It is a money maker for the trucker and has always given the best of satisfaction to the home gardener.

Is of clear, bright straw color, very productive, beautifully globe shaped, has a very small neck and ripens up fine and hard. Flesh is pure white, crisp, extremely sweet and mild in flavor, being unequalled even by the Spanish onions. Keeping qualities not of the best, but this is no drawback, as the onions always find a ready sale. Succeeds well in all sections of the country; matures in 130 to 140 days. Price of Salzer's Prizetaker: 748—Pkg., 10c; oz., 20c; 2 oz., 35c; ¼ lb., 64c; ½ lb., \$1.15; 1 lb., \$2.00; 2 lbs., \$3.70; 5 lbs., \$7.95, postpaid.

SALZER'S YELLOW GLOBE DANVERS

It is an excellent early variety, quick to mature, and is a remarkably good keeper. Yellow Globe Danvers is very productive, is an excellent keeper, is mild and full flavored, and has a uniform rounded shape, which is almost spherical. It is perhaps the best all around onion, and is very highly esteemed by all those who grow only one variety. Of a rich, coppery yellow, it reaches 2½ to 3 inches in size, with coats numerous and closely set.

Extensively used for general cultivation for home and market. A main crop and standard yellow onion everywhere. Produces medium to large sized bulbs of a uniform globe shape that ripen very evenly. Necks ripen down small. It is a good, reliable shipper. Attractive, rich, yellow skin. The flesh is creamy white, crisp, tender, mild and of fine flavor. For general table and cooking use this variety is unexcelled. Grows well anywhere in the United States. Matures in 120 days. 755—Pkg., 10c; oz., 19c; ¼ lb., 59c; ½ lb., \$1.10; 1 lb., \$1.95; 2 lbs., \$3.65; 5 lbs., \$7.75, postpaid.

SALZER'S MOUNTAIN GLOBE YELLOW DANVERS

This very early strain of Salzer's Yellow Globe Danvers Onion was bred in the mountains of Colorado. The onions are of fine globe shape, deep yellow color, very firm, and ripen two to three weeks earlier than the standard strain, and hence, are most valuable where the seasons are short. Good keeper and heavy yielder. 766—Pkg., 8c; oz., 18c; 2 oz., 32c; ¼ lb., 54c; ½ lb., 99c; 1 lb., \$1.85; 2 lbs., \$3.50; 5 lbs., \$7.50, postpaid.

Salzer's Giant Silver King

Salzer's Giant Silver King Onion is ideal for exhibition, fancy market or for the home table. We have grown specimens at Cliffwood Farms, 22 inches in circumference instead of 21 inches as shown in the illustration, and weighing 4 pounds. Matures early and is uniformly large and of fine shape, flattish round and thick. The silvery white skin is very thin and the fine grained, white flesh is of such mild and deliciously sweet flavor that it can be eaten raw like an apple. Fully grown, they measure five to seven inches in diameter; they mature evenly and keep well in storage. No other white onion attains such mammoth size, nor will any other white variety grow so uniformly large.

Mr. Peter Tillman, Head, Mont., writes, "I raised the largest onions from your Giant Silver King, that I ever saw." Salzer's Giant Silver King is enormously productive and every one desiring the largest and hand-somest white onions of the finest flavor will be more than satisfied with this superb strain. Matures in 110 days. 742—Pkg., 10c; oz., 22c; ¼ lb., 65c; ½ lb., \$1.20; 1 lb., \$2.25; 2 lbs., \$3.95; 5 lbs., \$8.75, postpaid.

AUSTRALIAN BROWN

Unsurpassed in keeping qualities, early and a sure cropper. It is a hard variety, of medium size, with rather thick skin of amber brown color. Flesh is white, fine-grained, very mild and sweet. 105 days. 737—Pkg., 5c; oz., 19c; 2 oz., 34c; ¼ lb., 59c; ½ lb., \$1.10; 1 lb., \$1.95; 2 lbs., \$3.65; 5 lbs., \$8.65, postpaid.

SALZER'S EBENEZER

The mildest flavored onion we have ever tasted, and it will keep hard and sound all winter long. Flesh is white and crisp, rounded shape, straw colored skin. One of the best mild onions for the home gardener and equally valuable for the market gardener. Keeps well, heavy yielder. 765—Pkg., 5c; oz., 17c; 2 oz., 30c; ¼ lb., 52c; ½ lb., 95c; 1 lb., \$1.75; 2 lbs., \$3.00; 5 lbs., \$6.95, postpaid.

GRANDPA'S ONION MIXTURE

Recall the days when Grandpa and Grandma planted the garden! There was always a corner in which a mixture of different Onion seeds was planted. If Grandma wished any kind of an onion it was usually found therein, and with this in view we offer "Grandpa's Conglomeration Onion Mixture" of mixed onion seed. 758—Pkg., 5c; oz., 15c; 2 oz., 28c; ¼ lb., 47c; ½ lb., 85c; 1 lb., \$1.45; 2 lbs., \$2.70; 5 lbs., \$6.35, postpaid.

YELLOW SWEET SPANISH ONION

Here is a grand, entirely distinct onion that has been giving a profit of from \$200.00 to \$300.00 more per acre than is possible with other onions. Salzer's Sweet Spanish is so mild and sweet that it is delicious when eaten like an apple.

It is one of the largest and one of the best all around onions ever produced. It is a fine, attractive, light yellow color. It is a dandy shipper. It is of a handsome, large, globular shape, and the sparkling flesh is pure, clear white, tender, and remarkably sweet and luscious. At Cliffwood Farms we picked up a few of these onions at random and placed them side by side on a yardstick. It took just seven to measure 36 inches, and they weighed 16½ pounds. Once tasted, always grown.

Mr. N. S. Nelson, Haley, N. D., writes, "Last year I planted your Yellow Sweet Spanish Onion, and they were fine." Mrs. Idella Wood, R. D. 1, Cottage Grove, Tenn., writes, "From one oz. of your Yellow Sweet Spanish, I raised 9 bushels of the finest onions we ever had." Mrs. Ella M. Street, R. D. 2, Sturgeon Lake, Minn., writes, "Your Yellow Sweet Spanish Onions are extra fine and are great keepers." Mr. Gardener, for an all around, superb onion, you can't go wrong on Salzer's Yellow Sweet Spanish!

Parsnip

SALZER'S HOLLOW CROWN

Parsnips prefer very wet soil and will thrive where carrots will not grow. A freeze is required to sweeten them. For the best results, deep soil is needed.

Salzer's Hollow Crown is enormously productive, roots are 10 to 12 inches long and about 3 inches thick at the shoulder. It is rich in saccharine, has smooth white skin, is uniform in shape, is sweet, tender, sugary. Not only of fine table quality, but very desirable for stock feeding. Also relished by horses. Matures in 130 days. 832—Pkg., 10c; oz., 14c; ¼ lb., 32c; ½ lb., 49c; lb., 75c; 2 lbs., \$1.40; 5 lbs., \$2.95, postpaid.

IMPROVED SHORT THICK

This new little parsnip makes a fine garden vegetable. The tops are very small, the roots are short and thick, about 3 inches through and about 6-7 inches long. Its short, thick character make this parsnip easier to pull than the older sorts, and it does not require such deep soil. Has a sweet, delicate flavor. 119 days. 836—Pkg., 12c; oz., 17c; ¼ lb., 45c; ½ lb., 79c; lb., \$1.25; 2 lbs., \$2.15; 5 lbs., \$4.85, postpaid.

SALZER'S DELMONICO

This nationally famous strain, introduced by us, does not require such deep soil for its cultivation. It is a stump rooted variety and hence easily harvested. Roots reach a length of about 8 inches, with a thick broad shoulder, skin is smooth and white, and the flesh is fine-grained, sweet, sugary, tender and most excellent for table use. Very early, maturing in about 115 days. It is a most prolific yielder, it contains more saccharine, is sweeter and more nutritious than other sorts, and as it is so easily harvested, large acreages are grown for stock feeding. Thrives on almost any soil. This splendid variety surpasses every other in yield and quality. 833—Pkg., 10c; oz., 18c; ¼ lb., 50c; ½ lb., 85c; lb., \$1.45; 2 lbs., \$2.75, postpaid.

IMPROVED GUERNSEY

Rhubarb—SALZER'S MONARCH

Rhubarb is used extensively for making tarts, pies, sauces and preserves. No plant is more easily increased and multiplied than rhubarb. SALZER'S LAXTON PROGRESS

The Early, Dwarf,
Heavy Bearer!

This fine variety of rather recent introduction is supplanting a good many older types. The vines are dwarf, 15 to 18 in. high, and the deep green pods are often 4½ in. long. By actual count, they contain one more pea to the pod and more pods to the vine than any of the older Laxtonian type. The peas are of a delicious, melting quality, sweet and tender. **859—Pkg., 10c; ½ lb., 21c; lb., 34c; 2 lbs., 58c; 5 lbs., \$1.18, postpaid. GIANT LAXTONIAN

An extremely large podded, best quality, dwarf variety with large pods and growing only 16 to 18 inches high and requiring no support. Laxtonian has made for itself a new class of wrinkled garden peas, the giant podded early dwarfs. Ripens very early and is ready to pick, green for table, in about 55 days. The pods measure 4 inches or more in length, slightly curved and of a dark green color. They are filled with eight to ten large, delicious peas, almost double the size of any other early dwarf peas. Unsurpassed in quality and yield. **880—Pkg., 10c; lb., 32c; 2 lbs., 55c; 5 lbs., \$1.14, postpaid. Not prepaid: 10 lbs., \$1.65; 30 lbs., \$4.50; 60 lbs., \$8.75.**

Wyoming Wonder

Resistant to fusarium wilt! Wyoming Wonder was bred with the idea of securing a large, dark green podded pea that would hold its sweetness after reaching the picking stage. And this we have accomplished, for Salzer's Wyoming Wonder remains sweet and tender a week to ten days after it is ready to pick!

The vines are dark green, reaching a height of 24 to 28 inches, depending upon the soil and other conditions. Pods are 5 to 6 inches, and even 6½ inches, long, beautiful dark green in color, pointed and slightly curved at the tip, and are tightly filled with 8 to 10 large peas of unusually sweet and sugary flavor. Matures in 75 days. Because of its all around good qualities, coupled with its ability to retain its tenderness and sweetness after it is matured, Salzer's Wyoming Wonder is alike valuable to the home gardener, the shipper, and the truck gardener. **862—Pkg., 12c; lb., 37c; 2 lbs., 60c; 5 lbs., \$1.32, postpaid. SALZER'S GIANT EXHIBITION

Huge Pods—Luscious Quality Peas

To those who wish huge podded peas, we suggest that they plant Salzer's Giant Exhibition. It is a late maturing kind. Is a wrinkled pea, very productive, the huge pods being well packed with peas, which, although large, are of a fine quality, sweet, sugary flavor and not tough as one would expect. The pods frequently grow to seven and even eight inches in length, depending of course somewhat on the soil, and it is not unusual to find between ten and twelve peas to the pod. The lateness of Salzer's Giant Exhibition is fully offset by its productiveness and its vigor-ousness. It has numerous first prizes to its credit, from various fairs, which accounts for its being named Exhibition. One of the best main crop varieties.

Pods rather straight, with curve near end. Vines grow vigorously. Ready to use in about 85 days. 872—Pkg., 15c; lb., 39c; 2 lbs., 64c; 5 lbs., \$1.42, postpaid. Not prepaid: 10 lbs., \$2.10; 30 lbs., \$5.95; 60 lbs., \$11.50.

THE FINEST, LARGEST AND HANDSOMEST PEPPER OF ALL

A magnificent variety, the largest and finest Pepper in cultivation. The plant is about two feet high, of strong, vigorous growth, stocky and erect in habit, very productive, and ripens its fruit earlier than the Ruby King. The flesh is usually thick and very mild, having none of the pungency of most of the older varieties. The immense size of the fruit and its brilliant color render it very attractive and will cause it to sell readily in the market. Every private garden should have this sort. Matures in 140 days.

Radish

Salzer's Early Bird

Handsome—Deliciously Spicy

We introduced this grand variety over 45 years ago and have been extensively developing and improving it ever since, so get your seed from us if you want genuine, true-to-type seed. Don't take anything "just as good." Salzer's Early Bird is of globe-shape, bright scarlet color, has very short tops, flesh is pure white, fine grained, crisp, nice, spicy taste, and never becomes hollow or pithy. Averages $\frac{1}{2}$ to 1 inch in diameter, according to maturity. It is alike most valuable for outdoor planting in spring or in autumn, and always commands top prices.

Salzer's Early Bird, the incomparable radish, produces radishes ready for the table in about 12 days' time, radishes that are uniform in size and shape, even in maturity, with small tops and of beautiful and attractive bright red color. It is also the best strain for growing under glass.

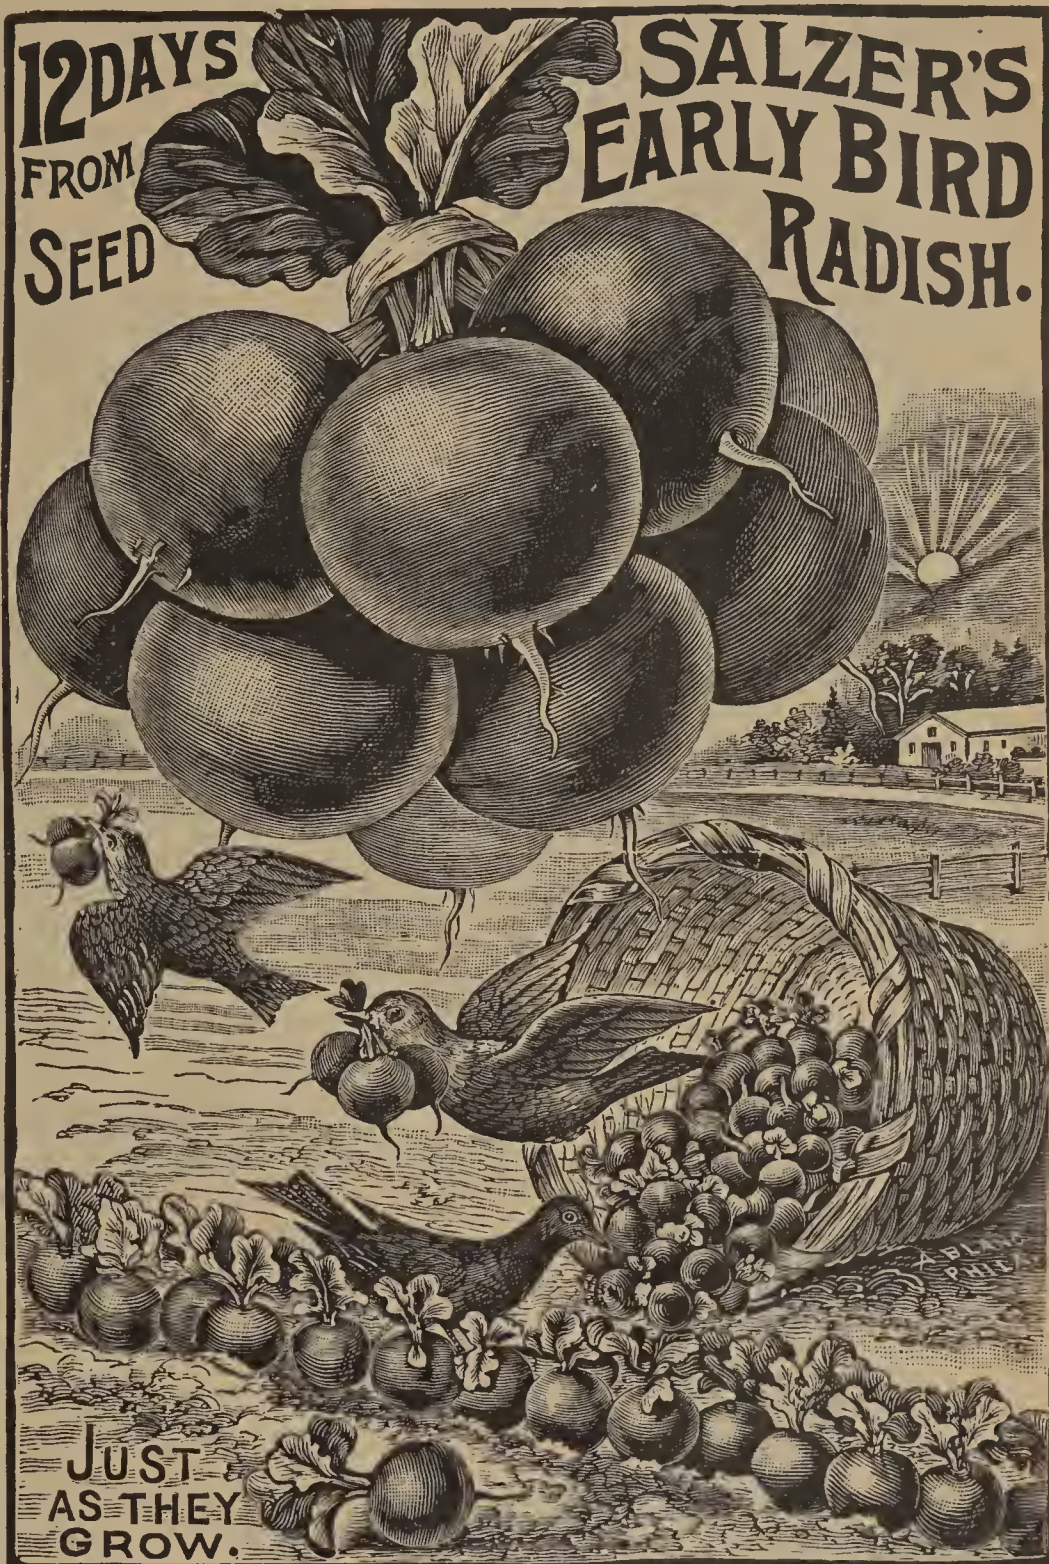

Mr. Niels P. Sorenson, R. D. 2, Battle Creek, Iowa, writes, "Have never before had such early, tender radishes as we had with your Early Bird." Mrs. A. E. Lovell, R. D. 3, Rapid City, S. D., writes, "We tried your Early Bird Radishes and they are wonderful in every way." Mr. Ben Betten, 900 So. Sheridan Ave., Tacoma, Wash., writes, "Your Early Bird Radish is the best I ever raised in the hothouse. They don't all run to tops." Mr. Weldon Wilt, Duncansville, Pa., writes, "We were much pleased with Salzer's Early Bird Radish."

Mr. Frank Weter, 325 Villa St., Elgin, Ills., writes, "I plant Salzer's Early Bird Radishes, as I have found them to be the earliest and best radishes obtainable." Mrs. Jason Drought, 207 Ridgewood Drive, Syracuse, N. Y., writes, "I planted Salzer's Early Bird Radishes last year and found them to be the best variety of radish I ever planted."

Salzer's Early Bird is a sure yielder and will not disappoint a single market gardener nor home gardener who sows it, but will be a source of genuine pleasure and profit. We know of none of our vegetables that will pay the market gardener better, and that is more desirable for the kitchen garden, than Salzer's Early Bird Radish, planted and sown in every section of the country.

Now, the substance of the whole matter is this: If you are at all anxious, either as a market gardener or as a grower of Radishes for your own private table, to have Radishes from 6 to 12 days ahead of your neighbor, and if you are anxious to have the finest Radish that seed can produce, even under the most adverse circumstances, then by all means plant Salzer's Early Bird. Its crisp, brittle flavor, as well as its remarkably quick growth and fine color, alike recommend it. In favorable weather the Radishes matured in about 12 days. Not only is Salzer's Early Bird extremely early, but it also yields heavily and its quality is unsurpassed. You will agree that it is the earliest, finest and best tasting radish that is grown to-day.

Salzer' Earliest White

Pure white color, almost like crystal, so clear and transparent! Matures in about 13 days. It is a highly developed strain of finest quality and produces the earliest radishes that can be grown.

It is of olive shape, is adapted to all soils, has a very short top, unusually thin skin, never becomes woody, flesh crisp, tender, and fine, spicy taste. Equally good for outdoor sowing or for growing under glass. Home gardeners, sow this and Salzer's Early Bird Radish for the earliest, finest two radishes in your neighborhood. Market gardeners sow these two varieties and make money. Mrs. Charles E. Beadle, 414 North Second St., Marshall, Ill., writes, "Your Earliest White Radishes are extra fine. We can't do without them." Mrs. M. Yunker, Hecla, So. Dak., writes, "My friends told of a party who raised such fine early radishes, and I find they were Salzer's Earliest White Radishes."

SALZER'S SPARKLER RADISH

A splendid variety, also known as American Half Red, Half White. Greatly prized for its handsome appearance and attractiveness, and decidedly popular. It received its name from its bright, sparkling, red color. A rapid seller on the market, and a good money maker. Always accustomed to unusual values, our customers will find this as fine a value as we have ever offered. Salzer's Sparkler is very crisp, solid, and sweet flavored, and carefully bred for short tops.

In shape it is nearly round, of a deep scarlet color, with the lower one-third white, which is slightly flattened. In size it runs from one to one and one-quarter inches. Does not become pithy until it reaches its maximum size, holding its crispness longer than most varieties. A splendid home garden variety. Tops short, which is one reason for its extensive cultivation. The quality is very fine, flesh is solid, crisp, tender, fine grained and sweet. Matures in about 25 days.

SALZERSALAD

The Delicious Salad Plant

Salzersalad is a distinct salad plant of recent introduction, that is most delicious when used in a number of ways. The sweet and tender stalks may be cut or diced raw for salads, they may be cooked and creamed like asparagus or celery, serving them hot, the tops may be cooked and served as greens, or the entire young plants may be cooked for greens, so necessary for the physical system. Doctors tell us that plenty of "greens" are very beneficial and necessary for good health.

Salzersalad was bred from Chinese or Celery cabbage and has heavily crumpled deep green leaves borne on long, thick, white, closely folded stalks, tender, sweet and delicious. It is so much superior to anything heretofore offered, that we know it will give the utmost satisfaction. Salzersalad yields heavily and over a long period, being quite slow to go to seed.

Healthful and tasty, both raw and cooked, Salzersalad has been declared the most delicious salad plant ever produced, by all who have tried it. 1050—Pkg., 10c; ½ oz., 23c; oz., 35c; 2 oz., 60c; ¼ lb., 95c; lb., \$3.00, postpaid.

or Served Raw!

TASTYGREEN—The Wonder Vegetable!

Tastygreen, the wonder vegetable, is rich in protein, mineral matter, and other elements so necessary to the development and maintenance of the human system. "Greens" are highly essential to our well-being, and of these, Spinach is perhaps the most widely planted and the most widely used, although unpalatable to many.

Tastygreen, the wonder vegetable, is far superior to Spinach or any of the other greens, and has a delicious flavor all its own, slightly and agreeably pungent with a Mustard taste when served hot, and when eaten raw, the flavor somewhat resembling raw Turnips. It is very rich in body and bone-building material, the Alabama Polytechnic Institute, Auburn, Alabama, reporting a content of 22.81 per cent Protein, 25.01 per cent Mineral Matter, 2.10 per cent Lime, 0.11 per cent Iron, and 2.45 per cent water. We believe that Tastygreen is going to become one of America's most popular vegetable greens.

Customers should give Tastygreen a trial this year, as everyone who has tried it, pronounces it delicious and

very much superior to Spinach. Tastygreen has small thin roots, about two inches long, and large oblong shaped leaves, rich dark green color, with a narrow white center rib. The leaves, stem and all, are prepared for table use in the same manner as Spinach or Turnip greens. It is very prolific and bears abundantly. The plants grow quickly and are ready for use in 21 to 23 days after planting. Successive sowings may be made, although the plants are very slow to go to seed; at Cliffwood Farms, plants sown in June had not gone to seed on September 5, two and one-half months later. Tastygreen withstands to a remarkable degree, extreme, dry, hot weather conditions, and will grow and produce bountifully during our spring and summer months, and in the south, during most of winter also.

Home gardeners, do not fail to plant this delicious and tasty new vegetable in your garden this year. Market gardeners, plant a small acreage to it at least, and see for yourself how rapidly the crop sells at market!

KING OF DENMARK SPINACH

It is slow to go to seed, and continues to grow and hold its fine quality weeks after other sorts have gone to seed. For a number of years we have been developing a strain that would withstand the hot sun, extreme dry spells and not go to seed easily, and in our King of Denmark, we have at last succeeded in combining these qualities. A fine strain for canning. Mrs. A. Krohn, Echo Bay, Ontario, Can., writes, "We like your seeds the best because we always have a good garden. The King of Denmark Spinach was fine."

It forms large, low, compact tufts. The tender leaves are large, broad and rounded. Exceedingly bushy, slightly crumpled and of a glossy dark green color. Ready for use as early as any spinach and retains its condition about two weeks longer. Matures in about 45 days. Yields abundantly. 1065—Pkg., 5c; oz., 9c; ¼ lb., 17c; ½ lb., 27c; 1 lb., 45c; 2 lbs., 80c; 5 lbs., \$1.70, postpaid.

Your Salzeralad and Tastygreens are still furnishing us greens on February 8th. Of course, we don't have your cold winters.—Mr. O. L. Gee, R. D. 1, Eagleville, Tennessee.

Salzer's Earliest of All Tomato

Although introduced by us many years ago, Salzer's Earliest of All is still the leading extra early tomato, the earliest large-sized variety grown, and we believe, as we are constantly improving it, it will hold its position and will stay on top as the Earliest of All.

With us in the North it has always been a study to produce extremely early vegetables, such as will ripen and produce perfect fruit in a short time, and in Earliest of All our efforts have been successful. Everybody who has tried it, speaks of it in highest praise. Earliness in tomatoes is essential for the market grower and highly desirable for the home garden. Salzer's Earliest of All is the best extra-early so far produced; it is our very earliest strain; it is a "short season" tomato. Ripening as it does in about 108 days, in the North, it is especially well adapted to all sections of the country, which makes it so decidedly popular. Finely bred for uniformity in size, attractiveness, extra earliness, and trueness to type, Salzer Quality is nowhere better evidenced than in this fine, highly praised variety.

If you want the very earliest tomatoes, combined with fine flavor, meatiness, productiveness, attractiveness, and tenderness, you should plant our Earliest of All. It is bound to please the most particular.

The fruits are of good size, brilliant scarlet color, nearly round, entirely smooth, and remarkably handsome. The flesh is solid, and of the finest flavor. The fruits are borne continuously in large numbers until killed by frost. They have a tough skin, firm flesh, making them good shippers and keepers.

Mr. J. W. Reed, R. D. 1, Box 47, Taylors Falls, Minn., writes, "Since using Salzer's Earliest of All I have been one of the first to have ripe tomatoes here. Many ask the name of them." Mrs. Monroe Stear, 514 North Penn St., Punxsutawney, Pa., writes, "We have planted your Earliest of All Tomatoes for years and have never found anything like them." Mr. Osear Matthews, R. D. 5, Nampa, Idaho, writes, "I have usually brought the first ripe tomatoes into town, with your Earliest of All Tomato seed."

Price of Salzer's Earliest of All: 1118—Pkg., 15c; ½ oz., 35c; oz., 60c; 2 oz., \$1.00; ¼ lb., \$1.75; lb., \$6.25, postpaid.

I must say that Salzer's Earliest of All Tomatoes were the earliest and the best tomatoes I ever raised.—Mr. D. F. Barnhart, R. D. 1, Missouri Valley, Iowa.

Dr. C. E. Myers Who Developed
Penn State Tomato

PENN STATE

**Permits Planting Closely Together
Prodigious Yields—Ideal for
Small Yards**

Developed by Dr. C. E. Myers of the Pennsylvania State College after years of intensive breeding work. The big feature of Penn State Tomato is its very compact habit of growth. Takes up little space but yields prodigiously, hence it is invaluable for small yards! Fruits are a rich scarlet, almost spherical in shape, free from blemishes, extremely early, very meaty, with luscious dark red flesh and few seeds. Self-pruning type. Test yields of 20 tons per acre were had, when planted as closely as 27 inches apart in rows 3 feet apart. 115 days. Our seed was grown under the supervision of Dr. C. E. Myers and has been certified by the Pa. Dept. of Agriculture. 1135—Pkg., 10c; 3 pkgs., 25c; ½ oz., 75c; oz., \$1.35; ¼ lb., \$3.50, postpaid.

EARLIANA

An extra-early deep red tomato, widely grown in all sections of the country. It is very productive bearing good sized fruit, uniform in size (about three inches in diameter), with solid, thick flesh. Good shipper. Matures in about 118 days. 1117—Pkg., 10c; oz., 25c; 2 oz., 45c; ¼ lb., 80c; ½ lb., \$1.50; lb., \$2.90, postpaid.

Bonny Best or Chalk's Early Jewel

BREAK O'DAY TOMATO

A very early tomato, disease-resistant, developed by the late Fred J. Pritchard, Senior Physiologist of the U. S. Department of Agriculture. Break O'Day is about 10 to 15 days earlier than Marglobe, from which it was developed, with fruit fully as large. The large scarlet, almost globular fruits mature in 120 days, they do not crack, are very solid, with few seeds, and are of delicious flavor. Very productive. 1162—Pkg., 15c; ½ oz., 19c; oz., 35c; 2 oz., 65c; ¼ lb., \$1.20; ½ lb., \$2.25; lb., \$4.00, postpaid.

SCARLET TOPPER

This early variety produces beautiful red fruits, smooth, meaty, globular in shape and with an elegant flavor. Scarlet Topper is enormously prolific and therefore should have rich soil to develop its heavy set of fruit to large size. Vines are medium dense, erect, and SELF-TOPPING. The main shoot, after forming two or three flower clusters, usually terminates in a flower cluster, checking vegetative growth much the same as cutting out the top, hence the name. 122 days. Fine for the home gardener. 1163—Pkg., 10c; ½ oz., 17c; oz., 30c; 2 oz., 56c; ¼ lb., \$1.00; ½ lb., \$1.90; lb., \$3.50, postpaid.

Scarlet Topper

BONNY BEST TOMATO

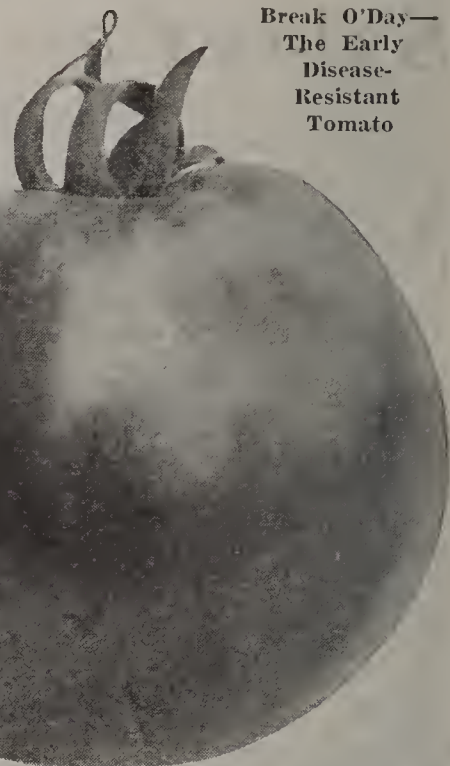

Also known as Chalk's Early Jewel. An early bright red tomato, large, smooth, and finely flavored, producing heavily and continuously throughout the season. A splendid main crop variety.

The fruits are very big, handsome, very solid and deep through. Of bright scarlet color, ripen right up to the stem without any cracks or green core. Flesh thick, with comparatively few seeds and of sweet flavor. A good shipper. 125 days. 1114—Pkg., 5c; oz., 25c; 2 oz., 45c; ¼ lb., 80c; ½ lb., \$1.55; lb., \$2.95, postpaid.

YELLOW PONDEROSA

Same fine characteristics as Improved Ponderosa described elsewhere except that the color is a rich golden yellow. T. G. Houston, Allenton, Mo., writes, "I grew your Yellow Ponderosa Tomato and raised fruits weighing 1½ to 2 pounds and measuring 5 to 6 inches in diameter. Not only I, but my neighbors as well, think they are unbeatable for quality." 1179—Pkg., 10c; oz., 45c; 2 oz., 84c; ¼ lb., \$1.40; lb., \$5.35, postpaid.

Tomato

DWARF CHAMPION

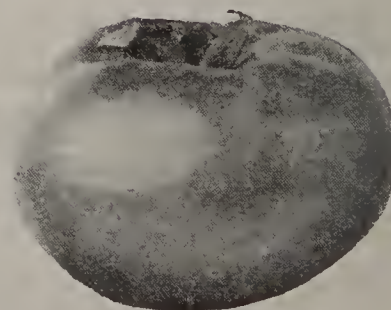

Quite distinct from other varieties in habit of growth and foliage. Good sort for the home garden as the plants, owing to their upright growth, take up but little room and yield abundantly. The plants stand up almost like small trees. Ripens early; of medium, uniform size; deep glossy red with purplish tinge; round, smooth, free from cracks. A very desirable sort. 1156—Pkg., 10c; oz., 37c; 2 oz., 68c; ¼ lb., \$1.30; lb., \$4.50, postpaid.

JUNE PINK

A large and decidedly pink-fruited variety. The fruits average about 5 to 6 ounces in weight, are nearly round and slightly ribbed. Flesh is solid, of fine texture and best quality. It is a prolific bearer, clusters of six to eight large fruits being borne close to the main stem. Is also known as the Pink Earliana. 120 days. 1141—Pkg., 8c; oz., 35c; 2 oz., 62c; ¼ lb., \$1.17; ½ lb., \$2.20; lb., \$4.00, postpaid.

**SALZER'S
IMMENSE
FERRIS
WHEEL
TOMATO**

SALZER'S FERRIS WHEEL

The tomato is recognized by the medical profession as holding five points of merit which makes it actually indispensable in the vegetable garden. It is the richest of all foods in vitamins;

it is the most wonderful and effective blood cleanser of all foods; it is the best of all vegetables for keeping the stomach and intestines in condition; it is an extraordinary tonic for the kidneys, and it is used widely in curing diabetes and Bright's disease. In addition, it is extremely valuable for feeding the juice to infants, accomplishing wonders in cleansing and building up the tiny stomachs. Every garden in the U.S. should contain at least a few tomato plants. Plant some this year!

Salzer's Ferris Wheel is of the large Ponderosa type and averages about 1¾ pounds in weight, although at Cliffwood Farms we have grown specimens weighing over 4 pounds. Fruits have thick, solid, meaty flesh, which is of the finest quality, delicious, sub-acid flavor and very small seed cavity. The vines are strong and vigorous and easily bear their enormous weight of fruits which are of handsome appearance, smooth, and which have a rich, dark purplish-crimson skin. Salzer's Ferris Wheel has been continually developed for immense size, uniformity, flavor, productiveness and to resist any tendency to split. Matures in about 142 days. A grand tomato for the home gardener as well as for market gardeners. Mr. Walter S. Sanders, 416 South 7th St., Mitchell, Ind., writes, "Have been raising your Ferris Wheel Tomato for 7 years, and sell them at 10c per lb. when others are 50c per bushel." Mrs. Geo. S. Yenny, R. D. 2, Vandalia, Ills., writes, "We want some Ferris Wheel Tomato seed. Our folks raised monster tomatoes from it." Christena Stomper, Rugless, Ky., writes, "I have grown your Ferris Wheel Tomato for 40 years."

1139—Pkg., 15c; ½ oz., 42c; oz., 75c; 2 oz., \$1.35; ¼ lb., \$2.40; ½ lb., \$4.45; lb., \$8.00, postpaid.

SALZER'S IMPROVED PONDEROSA

Rightly named "Ponderosa" because of the large size it attains. Fruit is very solid, with few seeds. Very often large tomatoes, from their very size, are rough and have a tendency to split, but we selected this seed so exhaustively that we have removed the roughness and splitting tendency as far as it is possible to do so.

Vines are vigorous and productive. Fruits large, oblong, purplish red, with thin skin. Flesh is solid, with a very small seed cavity, making it a most desirable variety for slicing. To all who desire large size, solidity and flavor, we unhesitatingly recommend it. Requires about 140 days to mature. Mrs. J. C. Mills, Reidy and Braddish Road, R. D. 1, Kansas City, Kans., writes, "We have been using your seed for 38 years. Your Improved Ponderosa and Yellow Ponderosa are two of the best tomatoes we ever planted."

1142—Pkg., 10c; oz., 48c; 2 oz., 84c; ¼ lb., \$1.55; ½ lb., \$2.75; lb., \$5.25, ppd.

1133—Improved Ponderosa, Salzer's Cliffwood Farm TRIPLE-A-TESTED seed: Pkg., 15c; oz., 59c; 2 oz., \$1.00; ¼ lb., \$1.90; ½ lb., \$3.45; lb., \$6.75, ppd.

Salzer's Select Stone

King of the red tomatoes! The leading main crop variety, extensively grown by market gardeners, ideal for the home garden. Grown extensively by canners for tomato soup, etc. Best of all for tomato juice.

Vines are large, strong and productive. It is a smooth, large tomato, nice and solid, free from core and cavity. Nearly round in shape. The eating quality is exceptionally fine, has no superior for slicing or canning. Fruits are bright scarlet. Our strain of this variety is carefully grown, selected, rogued and cured. Matures in about 135 days.

1122—Pkg., 5c; oz., 24c; 2 oz., 43c; ¼ lb., 75c; lb., \$2.50, postpaid.

1132—Select Stone, Salzer's Cliffwood Farm TRIPLE-A-TESTED—A special reselected strain certified by THREE-WAY tests: Pkg., 10c; oz., 30c; 2 oz., 56c; ¼ lb., \$1.05; ½ lb., \$2.00; lb., \$3.75, postpaid.

beauty. Mr. Acro Castle, Hueysville, Ky., won the prize of \$25.00 cash for the largest tomato with a weight of 4 pounds 7 ounces. Think of a monster tomato like that! Stella M. Bennett, Box 53, Sunderland, Mass., writes, "We have grown Salzer's Peak of Perfection Tomatoes for three seasons and find them far superior in size and quality, to other tomatoes." Mr. G. E. Brown, 128 So. 15th St., Camp Hill, Pa., writes, "Your Peak of Perfection grew to enormous size. I sold some at 10c each, 3 for 25c." Mr. Carl H. Haefeli, Sr., R.D. 6, Mansfield, O., writes, "Have ordered seed from your company for three generations. Had wonderful success with your Peak of Perfection and Earliest of All Tomatoes." Customers and friends throughout the entire country planted this fine strain last year again, and everyone had heavy delicious tomatoes, the best ever. Peak of Perfection is of immense and monstrous size with remarkably solid, meaty flesh. One tomato sliced is more than sufficient for the ordinary family of four or five.

Peak of Perfection is practically free from seeds, which naturally makes the seed harder to get and a bit more expensive, but it is well worth the slightly higher price. The tomatoes are of a beautiful appearance, uniformly large and smooth, with a rich dark crimson skin, meaty, and have a delicious, melting flavor. All esteem it the finest flavored tomato they have ever eaten. But, combined with this delicious flavor, is the enormous size! Think of one single tomato weighing almost five pounds. Thousands of people grew fruits weighing 3½ pounds, 3, 2¾, 2½, 2 pounds, etc.

PEAK OF PERFECTION should be in every garden this year. Home gardeners will point to the luscious fruits with pride—market gardeners will reap big profits. It succeeds in every section of the United States.

1131—Pkg., 17c; ½ oz., 55c; oz., 90c; 2 oz., \$1.50; ¼ lb., \$2.50; ½ lb., \$4.50; lb., \$8.25, postpaid.

MARGLOBE, DISEASE-RESISTANT

Marglobe is a cross between the Marvel and Globe tomatoes, developed by the U. S. Department of Agriculture, combining the second earliness of the former with the fine table quality of the latter. Marglobe is of fine scarlet color, globe shaped, of fine texture, deliciously mild in flavor, and wilt-resistant to a marked degree. Plants are of vigorous and heavy growth and very prolific. We have a record of one plant, on diseased soil, producing 107 large, fine round, best quality tomatoes. Customers will make no mistake in planting Marglobe where the ordinary varieties have been giving unsatisfactory yields because of wilt. Fine for tomato juice. 1130—Pkg., 8c; ½ oz., 16c; oz., 27c; 2 oz., 48c; ¼ lb., 89c; ½ lb., \$1.65; lb., \$3.00, postpaid.

Salzer's
Oxheart—
In a Class
By Itself!

SALZER'S OXHEART TOMATO

But here, sir, you will find the last word in tomatoes! Attractively different shape—looks almost like a Delicious Apple, doesn't it?—large size, unsurpassed table qualities, heavy yielder, healthy vines—it is really something novel and so good, you will like it immensely.

The skin is smooth, pink in color, and the fruits are almost seedless. The flesh frequently shows an inch thick, without a single seed cavity, and in flavor it is of the first class, luscious and delicious. Owing to its recently being developed, it is not yet entirely true to type, but almost all of the seed will bear oxheart-shaped tomatoes, and the balance of the fruits will be very desirable.

1177—Pkg., 15c; ¼ oz., 24c; ½ oz., 38c; oz., 69c; 2 oz., \$1.25; ¼ lb., \$2.25; ½ lb., \$3.95; lb., \$7.50, postpaid.

SALZER'S "NORTON" WILT-RESISTANT

If you have been troubled with wilt, plant Norton Wilt-Resistant Tomato. Has yielded 300 bu. to the acre on soil affected by wilt, while other varieties next to it, yielded 25 bu. The tomatoes ripen nice and solid on the vines. Firm, solid skin, is a wonderful shipper, of fine flavor, meaty, few seeds and very tender. Is a mid-season tomato, globular, and of a beautiful scarlet color. Fine for tomato juice.

1129—Pkg., 10c; oz., 28c; 2 oz., 50c; ¼ lb., 95c; ½ lb., \$1.75; lb., \$3.25, postpaid.

SALZER'S TENDERLOIN

The meatiest tomato grown, Tenderloin is the only fitting name for this splendid variety! The fruits are large and heavy, with thick walls, small seed cavities, few seeds, luscious and tender flesh, are borne in great profusion, and even though they reach such a large size, they do not easily crack or split. Its beautiful bright red color, smooth skin and handsome, attractive shape, always commands attention. At market, it fetches high prices, and home gardeners are enthusiastic over the heavy, meaty fruits of Salzer's Tenderloin. 1134—Pkg., 15c; ½ oz., 65c; oz., \$1.00; 2 oz., \$1.75; ¼ lb., \$2.95, postpaid.

Peerless Yellow Aster

Salzer's California Giant Asters

This marvelous type is the finest Aster in cultivation today, and commands the highest price at the cut-flower markets of all of our large cities. No less, does it make the best display of any Aster in the garden.

It is a cross between the Beauty Type of Aster and the Crego Aster, combining the vigorous tall growth of the former with the lovely, double, large flower of the latter. Salzer's California Giant is practically non-lateral, but instead, carries its blooms at the end of its long stems, without the small side branches, producing enormous flowers of wonderful substance on strong, stiff stems 20 to 24 inches long. The flowers measure 5 to 6 inches in diameter, with long petals that fluffily curl across each other and produce an exquisite bloom that has no equal.

Wherever exhibited, this superb Aster has won prizes and received awards of merit.

Wilt-Resistant Giant Crego Asters

Wilt-Resistant Asters

Wilt or stem-rot has deprived many flower lovers in sections all over the U. S. of the lovely Aster! Loss of seedlings or transplanted plants, stunted, one-sided and off color plants in those that survive, dark colored streaks in the stem, yellowing of the upper leaves and death of the lower leaves are characteristics of wilt or stem-rot. The wilt organisms are capable of prolonged existence in one's soil and the only remedy is WILT-RESISTANT SEED.

Our seed is practically immune to the ravages of wilt and produces an abundance of flowers on soil upon which ordinary seed would not possibly grow. In one severe test, plants from this wilt-resistant seed grew splendidly while 93% from ordinary seed succumbed.

We offer wilt-resistant seed of the following lovely types:

- 1743—Queen of the Market, Mixed
- 1745—Giant Branching, Mixed
- 1742—Giant Crego, Mixed
- 1744—Salzer's Beauty, Mixed

SALZER'S FROST PROOF PANSIES

Biennial. Salzer's Frost Proof Pansies are what their name implies; they successfully winter through the severe climate of this north country and bloom long after frost. For a number of years Frost Proof Pansies at our Cliffwood Farm have delightfully surprised us with the number of beautiful blossoms we pick during the cold months.

The flowers themselves are very large, often measuring 3 inches across, and are produced in a beautiful variance of colors from deepest black to snow white. Mr. B. R. Clemens, Mifflintown, Pa., writes, "The Frost Proof Pansy seed I ordered from you was very satisfactory and the blooms were beautiful." Miss Rhoda Cole, Okemah, Okla., writes, "I picked Pansies December 24th, and they were lovely."

Have pansies after all other flowers are killed by frost. We are able to give you varieties in straight colors as listed, or straight blended Cliffwood mixture in which all colors, bronze, blue, mahogany, yellow, mauve, black, etc., are represented.

PLANT DEPARTMENT

Order your plants for the garden and cemetery, for porch and window boxes, for the house and conservatory, from Salzer's this year. They cost no more. We ship plants all over the U. S. and guarantee safe delivery!

PLANTS NEED BATHS

A bath every three or four weeks is just about right for house plants. Bathing the plants removes many insect pests such as plant lice and mealy bugs, cleans the leaves, and makes the plants grow better. Add plenty of any mild soap to the water, and rinse the leaves with clean water, using a soft sponge or swab of cotton for the washing. During the bath, lay the plant on its side to prevent soapy water from entering the soil.

NOTICE

We will replace at half price any plants, shrubs, roots or bulbs that we send out, that do not grow! Since we cannot supervise the planting, watering, and general care of plants, shrubs, bulbs and roots, this arrangement is very fair to our customers. All claims, therefore, must be made within three days of receipt of plants. Otherwise, it is understood that replacements will be at half price.

TIME OF SHIPMENT

All plants are shipped when stock is ready and when the weather permits planting. For the south, orders are naturally filled much earlier than for the northern states. As orders are received, we book them and ship at planting time unless you instruct us otherwise.

HOW WE SHIP

To reduce weight and volume, plants are shipped without pots and with most of the dirt removed. However, if you wish us to ship house and bedding plants in paper flower-pots with all of the original soil attached to the roots, please add 10c extra for each plant so ordered. See footnote.

NEW AND RARE GLADIOLI

IRAK Silver-grey with sparkling petal texture. Grows five feet tall and has blooms $6\frac{1}{2}$ inches in diameter. The only grey flower ever originated; a sensational novelty as to color and a very beautiful variety because of its smooth satiny sheen. Offered almost exclusively by Salzer's, on our 70th Anniversary. We are one of three people in the entire country, that can supply Irak this year. Each, \$1.00; 3 for \$2.50; 6 for \$4.25.

BIT O' HEAVEN True orange has been a difficult color to secure in the gladiolus, but here is a very vigorous new variety which grows shoulder high and opens 8 or more large blooms of a vivid true orange color. Very choice and a striking new Gladiolus. Each, 85c; 3 for \$2.15; 6 for \$3.85.

MILFORD Huge new light violet-blue from New Zealand. Most sought-after of new blue varieties. One of the few blues that is really vigorous. A self color except for a small spearhead of deeper color in the throat. Each, 65c; 3 for \$1.70; 6 for \$3.00.

Lavinia The tallest Glad on our grounds last year was Lavinia! Its rich, unique shade of pink, its heavy, soft texture, its height, and the enormous size of its florets make it one of the finest ever introduced. Each, 70c; 3 for \$1.85; 6 for \$3.25.

Dr. Hoeg Velvety maroon with a fine edge of silver around each petal, lending a silvery effect. Substance is very rich and glossy. Florets large, with many open at one time. The very finest of all the dark red Glads. Each, 45c; 3 for \$1.10; 6 for \$1.95.

HERITAGE First prize winner at the 1934 National Gladiolus Show, Century of Progress Exposition! Also was awarded three Grand Champions of the show, at the Iowa State Show, Wisconsin State Show, and Minnesota State Show in 1934. It is a perfect pure pink color of unusual purity and freshness (of the pure pink class rather than salmon pink), with a snow white throat and white midribs. It has no line in the throat nor light streakings. We measured florets a full 6 inches across with 14 florets open at one time. No spike had less than 20 buds and some had up to 23. The spikes cut within 4 inches from the ground, measured over 5 feet tall! Each, 40c; 3 for \$1.00; 6 for \$1.65.

SONATINE A new, tall German importation of unusual beauty. Fresh bright pink of lovely melting texture. An excellent cut flower variety. Each, 35c; 3 for 90c; 6 for \$1.50.

IDABELLE FIRESTONE This beautiful lavender was named after the wife of the well known tire manufacturer. A tall variety opening 6 or 8 large blooms at one time. An unusual lavender. Each, 30c; 3 for 75c; 6 for \$1.15.

Phyllis McQuiston A superb new pure pink gladiolus of large size and unusual vigor. Originated by a former President of the American Gladiolus Society. A very outstanding variety. Each, 20c; 3 for 45c; 6 for 75c.

Sweetheart An adorable Glad, opening 4 to 5 florets, four inches in diameter, at one time. Immaculate, snowy white in color, not cold but rich, blending to a very vivid pale pink at the edges. Exquisitely frilled. Each, 15c; 3 for 30c; 6 for 45c.

TRUEHEDGE COLUMNBERRY

U. S. Plant Patent No. 110

Truehedge
Columnberry

A sensational form of *Berberis Thunbergii* that you will want, either as an individual shrub alongside the porch, as a group of several in your front lawn, or that you will want as a hedge!

In either case, Truehedge Columnberry grows so perfectly upright and so beautifully pyramidal in shape, that much less time is needed to acquire a hedge three feet high, or an individual plant, than was formerly the case. Note its shapely upright growth, in the illustration. If you need a row of shrubs along a driveway, along a walk, along your boundary line, or to replace a fence or if you want to replace your present hedge, plant Truehedge Columnberry! Set the plants 15 inches apart.

WE GUARANTEE that it will create a hedge, no matter what height is desired, quicker than Japanese Barberry twice as large! No matter what size Columnberry you order, you have an immediate row of hedge plants, because of its upright growth. It is perfectly hardy, withstanding 30 degrees below zero.

Truehedge Columnberry has wonderfully dense and heavy foliage, with glossy, healthy leaves a deep shade of green. The foliage is distributed evenly and densely starting right at the ground.

SHADE TREES

When planting trees, use fine compost or top soil for filling in around the roots, plant deeply and firm well. Cut away any broken or bruised branches or roots. Never use manure unless it is thoroughly rotted. It is also important that there be proper drainage, i. e., water should never stand long in the hole where the tree is to be planted.

We send out good live trees, but since we cannot superintend the care given them, we agree to replace at half price any that should not grow. Prices are for shipment by express not prepaid.

SALZER'S HARDY AMERICAN ALFALFA

A Field of Salzer's Common Alfalfa, Hardy Wisconsin Grown

Any sweet soil, with drainage, will produce Alfalfa. There is hardly a farm where a suitable location for a field of Alfalfa cannot be found. Soil that produces good crops of small grains, clover and potatoes, usually makes good alfalfa ground.

Pack the seed bed by frequent disking and harrowing. Seeding may be done from April 1 to July 1, and in August. Sow 1 inch deep on sandy soil, $\frac{3}{4}$ inch deep on heavy soil, using 12 lbs. seed per acre, in drills, and 20 lbs. broadcast. When sown in spring, it is usually put in like clover with a nurse crop. Early oats or barley, at the rate of 1 bu. per acre usually is the best. If sown in August, the ground is prepared 3 to 4 weeks beforehand, and the seed sown without a nurse crop. Sow the seed as you would clover—do not sow it too deeply.

DAKOTA NO. 12

For hardiness and adaptability, Dakota No. 12 takes rank among the foremost of the alfalfas. It has given remarkable results on all types of soil and under varied climatic conditions. The original fields from which this seed is taken, have been subjected to extremes of heat and cold, and during winter, have stood for days and weeks at a time without any protecting covering of snow. It is a popular and satisfactory strain, economically priced.

4209—Dakota No. 12, Dakota or Idaho Grown—Lb., 70c; 2 lbs., \$1.28; 5 lbs., \$2.73, postpaid to 4th zone. Not prepaid: 5 lbs., \$2.45; 15 lbs., \$6.95; 30 lbs., \$13.65; 60 lbs. (bu.), \$26.85; 5 bu. at \$26.60 per bu. Bags free.

GRIMM ALFALFA

Recognized as the hardest and most dependable alfalfa grown today, and recommended by almost every agriculturist in the country, as the best variety.

4204—Grimm, Idaho Blackfoot Grown, Certified Blue Tag. An especially choice strain of Grimm Alfalfa, grown by the Idaho Blackfoot Association, who can trace all their seed back to the original Grimm stock of Carver Co., Minn.—Lb., 82c; 2 lbs., \$1.53; 5 lbs., \$3.43, postpaid to 4th zone. Not prepaid: 5 lbs., \$3.15; 15 lbs., \$8.95; 30 lbs., \$17.15; 60 lbs. (bu.), \$33.50; 5 bu. at \$33.20 per bu. Bags free.

COSSACK ALFALFA

The extreme hardiness of Cossack makes it very desirable, being originally introduced from Russia. It is such an abundant grower that 3 to 5 lbs. seed per acre is sufficient, sowing in rows 3 feet apart with the garden seeder set at "Celery." 4205—Cossack, Minnesota Grown, Certified Blue Tag, Lb., 82c; 3 lbs., \$2.15; 6 lbs., \$3.95, postpaid to 4th zone. SALZER'S HARDY NORTHERN GROWN COMMON ALFALFA

Salzer's Hardy Common Alfalfa is any hardy alfalfa that cannot be designated as Grimm, Cossack, Liscom, or Dakota No. 12 Alfalfa, etc. Salzer's Common may contain a large percentage of, or may be, any one of these or a mixture of some, or all of them, or a cross of some of them. Alfalfa is an open-fertilized plant, hence crosses very readily. In other words, Common Alfalfa includes all alfalfas that are not clearly of hybrid origin. It is almost impossible to distinguish the different varieties of Alfalfas, whether from the seed, plant or flowers, and unless the field can be traced back and its pedigree established, the field is designated as Common Alfalfa. Our hardy Wisconsin Alfalfa Seed, for instance, is from some beautiful fields that for years have wintered through our severe, bitter cold Wisconsin winters but since the pedigrees cannot be established, we offer it only as Common. In selecting your seed, choose hardy northern grown seed. Hardiness is the important thing. The seed of Salzer's Hardy Northern Grown Common Alfalfa is from well established fields. Farmers in the North Central region must plant only adapted seed under the Soil Conservation program. Cheap seed may indicate imported or southern grown alfalfa seed.

HARDY WISCONSIN GROWN, COMMON—Only the hardest of Alfalfas will survive the bitter cold, long winters of Wisconsin. The seed we offer is from thoroughly established Wisconsin fields. 4200—Radium Brand—Lb., 69c; 2 lbs., \$1.25; 5 lbs., \$2.68, postpaid to 4th zone. HARDY IDAHO GROWN, COMMON—Idaho grown seed has for years had the reputation of being among the hardest of all the Alfalfas. 4213—Radium Brand: Lb., 64c; 2 lbs., \$1.17; 5 lbs., \$2.43, postpaid to 4th zone. WISCONSIN BARBLESS (Pedigree No. 38) BARLEY

The Best Barley for Malting Purposes

The new heavy yielding, smooth awn barley! Wisconsin Barbless or Wisconsin Pedigree No. 38 Barley was originated by the Wisconsin Experiment Station after years of breeding and selecting, and should be universally sown by farmers in or out of the state. It is a remarkably heavy yielder, with heavier, larger and plumper kernels and longer heads. Has yielded over 70 bushels per acre, of as fine a quality as you would want to see.

The greatest feature of all however, is the freedom from the troublesome awns. The smooth beards of Wisconsin Barbless Barley make it easier to handle and makes both the straw and the grain more valuable for feeding. It is six rowed, has very stiff straw and is resistant to disease. We do not know of any introductions of the Wisconsin Experiment Association that have not proven to be a great advance, and farmers everywhere may plant this wonderful variety with full confidence that it is the finest barley that can be grown today. It is similar to Wisconsin Pedigree except that the barbs have been removed, the kernels are larger and plumper and the heads longer. Sow $1\frac{1}{2}$ to 2 bu. per acre.

Wisconsin Barbless Pedigree No. 38 is a bearded barley, but the beards do not have the sharp awns or pricklers, hence the name Barbless.

4285—Lb., 24c; peck, \$1.00, postpaid to 4th zone. Not prepaid: Peck (12 lbs.), 50c; $\frac{1}{2}$ bu., 80c; bu. (48 lbs.), \$1.50; 5 bu., \$7.35; 10 bu., \$14.45. Bags free.

A Field of Wisconsin Barbless Barley, Pedigree No. 38

WISCONSIN PEDIGREE BARLEY

$1\frac{1}{2}$ to 2 bu. sow one acre; 48 lbs., in one bushel.

Originated by Prof. Moore, agronomist of the Wisconsin Experiment Station. Wherever tried in Wisconsin the Pedigree Barley has yielded from 5 to 20 bu. more than common varieties.

Pedigree Barley grows taller than any other 6-rowed sort and has very stiff straw, which stands up better. The heads are unusually large and long and are completely filled out with very plump grain, which is very uniform in size, brighter and whiter than that of most other sorts and very attractive. It is a barley the farmers can depend upon to produce a big crop.

4282—Lb., 23c; peck, 97c, postpaid to 4th zone. Not prepaid: Peck, 45c; $\frac{1}{2}$ bu., 77c; bu., \$1.45; 5 bu., \$7.15; 10 bu., \$14.00. Bags free.

SALZER'S SILVER KING BARLEY

Silver King has proven to be one of the heaviest yielding 6-row bearded barley varieties ever grown. Is very early and of vigorous growth: straw is strong and stiff, and very seldom does it lodge; heads are long and well filled. Silver King is the best barley to sow on heavy, rich soil, but it also thrives on warm, light soil.

4277—Lb., 25c; peck, \$1.07, postpaid to 4th zone. Not prepaid: Peck, 55c; $\frac{1}{2}$ bu., 85c; bu., \$1.60; 5 bu., \$7.90; 10 bu., \$15.50. Bags free.

SALZER'S RADIUM BRAND MEDIUM RED CLOVER

Clover may be grown successfully on many fields where alfalfa fails. Clovers are partial to lime and if your soil is acid, it should first be limed well. It is economy to inoculate the seed before planting. Salzer's Clover Seed, Wis. and Minn. grown, is not only famous for its hardiness but it is pure.

To begin with, we are not bothered much with dodder and buckhorn, two of the most noxious weeds, so troublesome in some states, and then we have the most up-to-date seed cleaning machinery. All of the seed we send out is thoroughly recleaned seed.

Our Radium Brand Clover is among the finest obtainable. It is our best grade, and tests around 99% in purity; the most of it is 99½% or better, and it is free from noxious weeds. Our Superior Brand tests about as high,

free from noxious weeds, but it is not quite as fancy in appearance.

Medium Red, the most important clover, lives two years or more, grows about two feet high and makes two crops a year, yielding about three tons of cured hay per acre. Clover hay is very nutritious, stock fed on it requiring less grain. Does well on a great variety of soils, thriving luxuriantly on strong, well drained loams. It is the best for crop rotations and increases succeeding crops from 25 to 60%. Sow as early in spring as possible. Wis. and Minn. grown seed. Sow 15 lbs. per acre. To qualify for the soil conservation program, farmers must plant domestic seed grown from Kansas north. Bags free.

WISCONSIN GROWN ALSIKE

Alsike can be grown on soil that is slightly acid or sour, where lime cannot be applied, and where other clover or alfalfa will not grow. It can be grown on heavy, wet or low soil that sometimes becomes waterlogged, and it also endures dronth well.

Alsike Clover is exceptionally leafy, frequently producing as much hay as Mammoth. Alsike is the hardiest of all clovers. Withstands the severest cold and does not readily winter-kill or heave out of the ground with frost, and readily reseeds itself. Grows about two to three feet high. Alsike does well if sown with grains, either spring or fall. Should be cut for hay as soon as it is in full bloom and for seed when two-thirds of the heads are ripe. Sow 8 pounds per acre. One of the best honey-producing plants. Bags free.

MAMMOTH RED OR SAPLING CLOVER

This is the clover to sow upon thin, sandy ground, and poor soil that is too low and heavy for Red Clover. Seldom freezes out. Mammoth Red Clover is quite distinct from Medium, being larger, of coarser and more robust growth, and two to three weeks later. On rich, loamy soils it attains an immense growth, yielding much more bulk than medium clover, but makes only one crop, and pasture after that. It is especially used by farmers for a permanent hog pasture. Sow 15 lbs. per acre. Wisconsin and Minnesota grown seed. Bags free.

ALSIKE AND TIMOTHY MIXTURE

Wisconsin and Minnesota Grown Seed

Our seed is grown in this neighborhood where most of the farmers grow this mixed seed in preference to other grasses and clovers, as the two varieties are adapted for the same kind of soil, mature at the same time and produce a larger crop of hay or seed than either planted alone. 12 lbs. per acre.

DWARF WHITE DUTCH CLOVER

A low, close-growing clover; round, white heads; very fragrant; best adapted to moist soils, but does well on dry land; excellent in mixtures for permanent meadows and pastures. Unexcelled Pasture for Hogs and Cattle

WHITE SWEET CLOVER

Minnesota Grown Seed. Very Hardy.

White Sweet Clover is a biennial leguminous plant of tall, shrub-like growth, somewhat like a coarse alfalfa growing 8 to 10 feet high. Its blossoms which rarely appear until the second year, are white and give a strong smell of honey, quite perceptible some distance away. If not allowed to reseed, it will die out the second year.

Culture: Sweet Clover is best sown in the spring with one bushel of extra early oats or barley per acre as a nurse crop. Can also be sown successively in June or July without a nurse crop, or in corn at the last cultivation. Use 15 lbs. seed per acre.

Soil: Sweet Clover thrives on the poorest, sandy soil and on dry hill sides, where no other clover will grow.

As a Pasture Plant White Sweet Clover is most valuable. It is the first forage plant in Spring that affords green food to animals and the last one that is killed by frost. Its grazing capacity is one beast per acre. It grows very rapidly, and as soon as it is 5 to 6 inches tall, the cattle should be turned on, as tramping the ground suits it and if allowed to grow very tall, it will get hard and woody; if kept eaten down not very close to the ground the plants will constantly throw forth fresh growth.

Cattle not accustomed to it do not always eat it readily at first but soon acquire a taste for it and then eat it greedily.

Hay—White Sweet Clover should be cut the first season when it shows the maximum growth in Fall. The second year it is cut before it comes into full bloom; it will make fine hay for all stock; in quality it is second to none and has the same feeding value as alfalfa. The hay contains 14.5% crude protein. Bags free.

GRUNDY COUNTY WHITE SWEET CLOVER

A dwarf strain of white blossom, two to three weeks earlier than the common white-sweet, and not quite as rank a grower. Developed in Grundy County, Illinois, hence its name. Although it grows to a good height and makes an elegant hay crop, it is not as tall as the common, and is much more easily handled. It is finer and more leafy, branching thickly about a foot above the ground and making better quality hay. 15 lbs. per acre. Bags free. Minnesota grown.

OATS

WHITE CROSS OR WISCONSIN PEDIGREE No. 19—This wonderful early white oat, in fact the earliest of all oats, was awarded first premium at the Wisconsin State Fair.

Prof. B. D. Leith, Associate Agronomist at the Wisconsin College of Agriculture, bred this new oat after years of work. The object was to produce a high yielding early white oat, with a taller straw and a larger kernel than is usually found in early oats. The large kernel and white color make it attractive, and the tall straw is particularly desirable in localities where the soil is light. Has a branching habit and is a good rust-resister. It has a tendency to lodge on rich soils, but is especially well adapted to sandy soils. 4625—See prices above.

STATE'S PRIDE OR WISCONSIN PEDIGREE No. 7—

Earliest yellow oat. Prof. B. D. Leith, University of Wisconsin, points out that in spite of unfavorable weather, State's Pride yielded 75.7 bushels per acre. Earliest of all yellow oats and best because it is an excellent nurse crop and escapes rust, because of its earliness. Does not lodge easily, but fills out the kernels if it does, making it especially desirable for rich soils. Has a very short, stiff straw. It is a yellow oat, bright, shining, thin hulled, meaty and is about the best oat. 4623—See prices above.

WISCONSIN PEDIGREE No. 1—

Wisconsin Wonder. This fine white variety originated at the Wisconsin Experimental Station, and is one of the most sought after of all oats. It stands up better than any other oat, on rich river bottom land where other varieties usually lodge. Its coarse, stiff straw permits it to stand up well on rich manured land. Especially recommended for following cultivated crops. The kernels are white, rather long, with a medium hull. Heavy yielder. Early. 4620—See prices above.

SALZER'S WHITE KHERSON—(Iowa 103)—

A grand oat which has twice carried off sweepstakes at the International Dry Farming Congress. An early variety; splendid nurse crop; permits early harvesting and late sowing of other crops. Kernels are slender, plump, white, and thin-hulled. Heavy yielder. 4622—See prices above.

60-DAY, JULY OR KHERSON—

It is a small, yellowish oat with a very thin hull and practically all meat, and with short, stiff straw. Does not lodge easily. Sixty Day Oats are extremely early and are especially fine in a dry season. They usually yield 70 to 80 bushels per acre, at least. It adapts itself readily to the different soils. Can be harvested with your barley. Mature in about 80 days, rather than 60 as the name would indicate. 4616—See prices above.

SWEDISH SELECT OR WIS. PEDIGREE No. 5—

A splendid late white oat for upland soils and poor land. The kernel is large and plump. Straw grows tall and rank and the panicles are large and well filled. It is a late maturing variety. Rust resistant and not easily susceptible to smut. Adapted to the lighter soils which are less liable to cause lodging. 4621—See prices above.

FIELD PEAS — YELLOW CANADA

Plowed under as a fertilizer, Field Peas rank next to Red Clover. They can be grown alone for fodder purposes and green manure, but for a dairy feed it is profitable to mix them with oats, rye or barley, and to cut for hay when the oats are heading out. Hay is of the finest quality, and cattle, horses and sheep thrive on it. Can be sown with oats at the rate of 1½ bushels of peas and 2 bushels of oats for a double crop and threshing at one time and separating with a cleaner. 60 lbs. in one bushel. Drill the peas in 4 inches deep, as early as the ground can be worked, and then, 2 weeks later, drill in the oats crosswise.

Used for silage, an ideal balanced ration for milch cows can be had by mixing two parts Salzer's Billion Dollar Grass and one part Salzer's Soy Beans when filling your silo. Such a mixture will require no other grain, oil meal or other feeds, and you will have a feed that will materially increase the production of milk. This splendid grass will also produce a fine leafy hay anywhere, in from six to ten weeks' time, varying in height from five to eight feet, according to the richness of your soil. Think of it—it has been known to produce as much as 12,000 pounds of hay to the acre and 50,000 pounds of rich green fodder! This at the Massachusetts Experiment Station. This splendid grass was introduced by us years ago, and the true seed is frequently obtainable only from us.

Prof. Brooks, of the Massachusetts Experimental Station says: "At our station it produced 67 bushels of seed, 11,297 pounds of straw, 36,000 pounds of green fodder, 12,000 pounds of hay per acre, being superior to good corn fodder in feeding for milk and in combination with the Soy Bean makes very superior ensilage." Prof. Brooks found by alternating the BILLION DOLLAR GRASS cut from day to day and fed green to cows with well-eared Corn Fodder, that the cows invariably increased in milk when put upon it, and fell off when changed to corn alone.

A Quick Producer

Salzer's Billion Dollar Grass will produce a hay crop in from six to ten weeks, anywhere; and if sown the 20th of May will be ready to cut the middle of July for hay, attaining the height of (according to the richness of the soil and warmth) from 4 to 5½ feet. It is the one grass to sow if you are going to be short on hay for your cattle and sheep.

Better Than Corn For Silo

Cows with both Billion Dollar Grass and corn before them, will take the Billion Dollar Grass first and consume it without waste; when put upon Billion Dollar Grass they increase in milk and fall off when feed is changed to corn. An ideal ensilage mixture is made of two parts Billion Dollar Grass and one part of Soy Beans (See Page 123) mixed when filling the silo. This mixture forms a complete balanced ration for milch cows without grain, oil cake, etc.

A Remarkable Grower

It is truly the most marvelous grower, the most luxuriant stouter that we have ever seen. Just imagine a field sown to Billion Dollar Grass, with every spear of it over 6 feet tall, yielding from 26,000 to 50,000 pounds of as rich, green fodder as the world has ever seen. Men talk about hard times, but positively hard times must vanish on every farm where Billion Dollar Grass is sown. There is reason for it; you can get two rich crops from the same annually.

Sow when all danger from frost is past (it grows quickly) and get from 26,000 to 50,000 pounds of fodder, which you can put in your silo or cure for hay and the Billion Dollar Grass will quickly spring up again and give you another yield. This can be cut again for hay; then the field will give you some pasturage all fall. If grown for a seed crop, it gives only the one cutting and some pasturage thereafter.

Feeding Value

Here is where the Billion Dollar Grass comes into grand play. Prof. Williams of the United States Department of Agriculture, says: "Already widely grown as a hay crop, it deserves more general use for soiling, as this Grass is of particular value for feeding to dairy cattle, young stock and sheep. The Billion Dollar Grass (Panicum Crusgalli) in many sections of the country can be made a supplement for pasture in such a way as to allow a material increase in the number of stock that can be kept on the farm. On account of the extra yield of forage and good quality of product, the Billion Dollar Grass is most excellent for silo use, as frequently a good crop can be raised under conditions which would not admit the growing of corn for ensilage. The Billion Dollar Grass, if compared with seed and forage, will run ahead of Timothy. The seed contains almost as much fat and extract matter as shelled corn, a little more protein and about four times as much crude cellulose."

Poultry, Geese and Turkeys all relish the Billion Dollar Grass in the green state, and keep healthy and happy and fresh on the seed thereof when fed during the fall and winter months.

Hogs and Their Families—Well, well, how the hogs do grunt and give that contented swag of the tail when they can pasture on the Billion Dollar Grass, and then if you wish to fatten them, give them daily rations of the seed. Remember this grass will produce from 40 to 100 bushels of seed per acre.

Cows, Calves and Heifers look with pleasure on the Billion Dollar Grass pasture and feed in happy contentment upon its luxuriant swath and glory in the Billion Dollar Grass hay, especially if fed along with Soy Bean hay or Pea oat hay.

Horses, Mules and the Like jump over a 4-foot fence to get at the Billion Dollar Grass, and they will fatten and keep healthy thereon. They will eat the hay, although not as eagerly as cattle.

Culture

Sow about 20 pounds per acre, broadcast, but not until after corn planting time, covering about ¼ inch deep. It is a tender annual and will not stand frost. May be sown anytime from latter part of May up to July 1, and even later.

FOR HAY—Cut when the plant is in early bloom. Cut with a mower and allow it to cure in the swath for a day; then rake into windrows and when sufficiently cured, put it into cocks for about a week.

FOR FEEDING GREEN—All rich, luxuriant growing grasses and forage plants must be fed in the green state moderately at first. The Billion Dollar Grass (or Panicum Crusgalli) is one of those rich, magnificently luxuriant growing grasses, therefore you should turn in hogs and cattle and sheep and horses at first moderately, after they have had a good feed somewhere else, and then gradually accustom them to this. It is on the same plan as hungry stock turned into rich clover, they would find harm—yes, possibly death. Turn them in at first moderately, and you can soon permanently.

FOR SEED—Let the Billion Dollar Grass get thoroughly ripe; cut and thresh as you would Timothy. The seed is rich and nutritious. Billion Dollar grass is an annual. Bags are free.

A Field of Salzer's Kentucky Blue Grass

RED TOP (Solid Seed)

Red Top grows under a greater variety of conditions, than almost any other grass. It is the best wet land grass next to Phalaris, and it will grow on soils so poor in lime that other kinds fail entirely. Red Top will thrive on almost every type of soil except sand, and in every part of the country.

It grows rapidly and vigorously, it withstands prolonged drought, and it forms a dense, compact sod that withstands heavy grazing and continues to grow longer than any other grass. Red Top provides good pasture and it grows heavy enough and tall enough to make good hay. Ideal for wet land or a sour land hay crop and for pasture on damp soils not sweet enough for Kentucky Blue Grass. 2 to 2½ feet high. Sow in early spring, at the rate of 8 lbs. per acre, broadcast, covering lightly with weeder or sweep. Often sown broadcast after drilling in grain, the grain serving as a nurse crop. Bags free.

SUDAN GRASS

Haven't you a few acres on your farm upon which you would like some hay that can be raised quickly and easily and that will give you 4 to 8 tons of cured hay per acre? Plant Salzer's Sudan Grass Seed! The drier and hotter the weather, the more will you be surprised at the wonderful yield. Salzer's Sudan Grass is one of the most prolific hay crops ever grown; in the South it gives three crops and in the North, two crops of hay a season. A surprisingly rapid grower, and as a catch crop fully equal to Millet. Sudan Grass is used for pasture, ensilage and soiling as well as for hay. It does best on a rich loam soil, but it has been grown successfully on almost every class of soil from a heavy clay to a light sand. It is sweet, heavy-yielding grass; absolutely drought proof; stock of all kinds eat it greedily, often in preference to Alfalfa; it analyzes over 9 per cent protein.

Culture—Sudan Grass is an annual. Do not plant it until the soil is warmed up in the spring. Sow at the rate of 25 to 35 lbs. per acre, using a grain drill and cover from 1 to 1½ in. deep. A heavy seeding is desirable. The seed is cheap. Cut at the heading out stage. Easy to cut with mower and cures readily. Place in cocks, the same as Alfalfa, and leave it long enough for the stems to become dry. Cut again when high enough. If grown for seed, only one crop can be harvested.

All live stock eat the hay readily and greedily. There is a place for Sudan Grass on every farm. It is cheap, it grows rapidly, and it makes its best growth when other pastures often fail during the hot weather. Can be sown any time 70 to 75 days before frost. There have been cases of cattle poisoning from Sudan Grass, but if not pastured until the plants are knee-high, nor if the plants become stunted from any factor, or wilted, the amount of prussic acid is small and not dangerous. These are the findings of the Wisconsin Station. The quick and enormous yield of hay and pasturage are of such tremendous benefit to the farm, that it is being more widely planted each year. 35 lbs. Sudan and 30 lbs. Soy Beans per acre, drilled in with a grain drill, in 18-20 in. rows, make a good hog pasture and ensilage. 4530—Lb., 25c; 5 lbs., 73c, postpaid to 4th zone. KENTUCKY BLUE GRASS

Also known as June Grass. This grass is one of the first to start up in the spring and is still green when the snow flies in the fall. Uninjured by extremes of cold, heat, wet or drought, its hardiness and ability to withstand tramping of hoofs has made it particularly valuable everywhere, consequently it is now very extensively grown. It is easy to start, easy to grow and to establish pastures of the greenest verdure. Its feeding value is exceptionally high, and it makes one of the best, sweetest and most nutritious pastures or hay crops that can be grown. Broadcast 20 to 30 lbs. per acre, covering lightly with weeder or sweep. Kentucky Blue Grass takes hold slowly, hence a clean seed bed and clean seed are important. Bags free.

BROME GRASS

Very desirable for permanent pasture and one of the very best grasses for dry soils. Brome Grass is one of our hardest perennial grasses; no amount of cold will kill it. It withstands the severest drought, and water may stand on it for weeks without injury.

It roots deeply, often 4 to 6 feet, growing on good soils where large yields of cured hay are harvested, and also giving splendid returns on poor, sandy land where timothy is frequently a failure. As a pasture grass it is of special value, staying green and succulent during summer and enduring close cropping. Sow 25 lbs. per acre broadcast, covering ¾ in. deep. Bags free.

SALZER'S PENCILARIA

Pencilaria should be planted six inches apart in the row and the rows about 3½ feet apart. Cultivate two or three times if possible, and by that time the sight will astonish the beholder. It will average 40 rich, juicy, leafy stalks to the plant, which will be covered with seed heads 12 to 24 inches long. The seed makes good food for poultry, and ground for cattle, it cannot be beat. Sow when you would Corn. The usual way of growing it, however, is to mow it when 3 to 6 feet high, and it will immediately start again, and can be mowed 3 to 4 times during the season. It is greatly relished by all kinds of stock, either in its green or dry state. Every farmer should try it if he wants an immense crop of fodder cheaply. Sow in drills 5 to 6 lbs., or broadcast, 8 lbs. per acre.

Salzer's Timothy

NORTHERN GROWN TIMOTHY

Timothy is the king of all grasses in our country; as a hay crop it has long been the standard and it is adapted to a wider range of conditions and is grown over a wider area than other grasses. Roughly speaking, it is grown principally in the upper half of the country; it does not thrive in the hot climate of the South nor in the arid regions of the West. No other variety of tame grass will stand the extremes of climate as well as Timothy, or compare with it in average yields or feeding value. It produces one of the best qualities of hay; it forms compact stools or broad leaves; it does not produce creeping stems or runners. It luxuriates on clay or moist soil and is unsurpassed on peat, but is not so well suited for light sandy soils. Height 2 to 4 feet. May be sown in the early fall or spring. If sown alone sow about 15 pounds per acre. Land prepared for Wheat or Oats is well prepared for Timothy. Rolling before and after drilling increases the supply of moisture surface. For hay, cut after the purplish blue blooms have fallen and when the seed has formed and is in the "milk" stage. Earlier cutting decreases the next season's yield, and later cutting furnishes a less palatable hay. Set the mower so it cuts a full four inches above the ground. Too close mowing saps the strength of the plants. 45 lbs. in 1 bu. Bags free.

SALZER'S "LAUGH AND GROW FAT" HOG PASTURE MIXTURE

One of the most vexing questions with every farmer during the summer months is a rapid meat producing hog pasture. In our Laugh and Grow Fat Hog Pasture we have a mixture so balanced to increase flesh that farmers cannot afford to be without it.

"Laugh and Grow Fat Mixture" contains generally among others the following: Billion Dollar Grass, Turnips, Amber Cane, Soy Beans, Speltz, Field Peas, Rape, Vetches, Oats, Rye, Millet, Timothy, Clover, Rye Grass, etc. It is well in ordering this Mixture to tell us whether you want it for early or late planting and the condition of your soil. (Sow 30 to 50 lbs. per acre.) This mixture consists of annual fodder plants. Owing to the great variety of plants it is composed of, it is more greedily eaten than other forage, not only by hogs, but also by all other live stock, such as sheep, cows and horses.

PHALARIS OR REED'S CANARY GRASS

A magnificent grass for wet, low-lying, poorly drained soils—in fact, the only grass we know of for reclaiming waste, marshy lands. On many farms are to be found low wet situations where neither Red Top, Alsike, nor anything else will grow, and for these situations, Phalaris or Reed Canary Grass is the thing to plant. Phalaris is very hardy and as the seed shatters so easily, coupled with the flowing and receding of the water, it spreads rapidly.

The hay is a little coarse, especially if it is left to grow too long, but it is nutritious and tasty and all stock like it and relish it. The leaves are quite broad and the plant flourishes, often growing 5 to 7 feet high. Underground stems rapidly form a tough sod and hold hay machinery without difficulty. Yields of 4.57 tons of hay per acre from two cuttings, have been reported. Cut the first crop for hay as soon as the heads or panicles appear. Two cuttings can be made and then some fall pasture may be had or 3 cuttings may be made. If you have any wet or swampy land, Phalaris is the grass to plant.

Broadcast 5 to 6 pounds per acre or drill in ½ in. deep, at the rate of 2 to 3 pounds in 18 in. rows. If the land is well drained so you can prepare a seed bed, do so. If covered with water, wait till the water recedes and then sow. May also be sown on the ground and snow in January, leaving it to settle with the weather. 4511—Radium Brand—½ Lb., 33c; lb., 59c; 2 lbs., \$1.10; 3 lbs., \$1.55; 5 lbs., \$2.43, postpaid to 4th zone. SOW SALZER'S SEEDS

Your "Laugh and Grow Fat" Mixture gave us excellent pasture in six weeks.—
Mr. Adler La Barre, R. D. 2, Box 21, New Lisbon, Wis.

SAND VETCH

The Great Soil Reclaimer and Drought Resister

Often called Hairy Vetch because of its downy or hairy stems and also called Winter Vetch, as when sown in the fall, it lives through the severest winters and completes its growth the following spring. Planted in spring, however, it makes its full growth in the same year, and then does not winter through.

Sand Vetch is a heavy carrier of root tubercles which makes it one of the very best soil builders! It will do well on poor land, and especially on sandy land, enriching it more than any other crop. Once established, it resists almost any summer heat or drought. Sand Vetch will supply abundant green forage from early spring until fall! It is a tremendous yielder, producing up to 15 and 20 tons green forage per acre. The hay contains 19.9% crude protein. If grown for hay, leave standing until the seed pods are about half formed; at this stage it is easily cut with a mowing machine or pea harvester, and quickly cured. If to be fed green, it should be cut when in full bloom. May be grazed in early spring without greatly reducing the hay crop, or it will give some pasture after cutting. It gives one cutting a season.

Inoculate before planting. Sow 45 to 60 pounds with one bushel grain, preferably Oats, Barley or Rye. Drill in 1 to 2 in. deep. Or broadcast by hand or with a hand seeder and cover with a disk harrow. Sown with Oats or Barley, Vetch has something on which to climb and the grain also furnishes variety in pasture. May be sown from early spring until September.

4727—Lb., 35c; 5 lbs., \$1.18, postpaid to 1th zone. Not prepaid: 15 lbs., \$2.50; 25 lbs., \$3.90; 50 lbs., \$7.50; 100 lbs., \$14.50. Bags free.

SAND VETCH AND OATS MIXED

A carefully blended mixture of Sand Vetch and Oats, for a rich pasture or a bountiful hay crop. Plow and harrow your field and sow 65 lbs. per acre, up to May 20th. In six weeks the field should be ready for pasture! 4728—Not prepaid: 50 lbs., \$1.45; 65 lbs., \$5.25; 100 lbs., \$6.75. Bags free.

SPRING VETCH OR TARES

Annual. Resembles Sand Vetch, but the stems are smooth and the pods and seeds larger. Not as hardy as Sand Vetch and requires a fairly rich, moist soil; does not thrive on sand. Relished as a fodder and grain crop, yields heavily. Contains 17.3% crude protein. Sow 50 lbs. with 1 bu. oats per acre and handle like Sand Vetch. 4730—Lb., 30c; 5 lbs., 98c, postpaid to 4th zone. Not prepaid: 15 lbs., \$1.95; 25 lbs., \$3.00; 50 lbs., \$5.75; 100 lbs., \$11.00. Bags free.

SPRING SPELTZ OR EMMER

Let Salzer's Speltz help you cut down your feed bills. It will grow any place on earth where grain can be raised and it grows where wheat, oats and barley would be a failure; it is the most profitable hay and grain food on earth; it ripens early and neither rusts, blights, nor lodges; it is relished by all classes of stock; it is splendid for hay and fattens in the green state.

Sow on ground prepared as you would for barley, wheat or oats, either broadcast or drill, at the rate of 60 to 80 lbs. Frost will not damage early planting. Cut the grain when it is a little past the milk stage, when it will make a splendid grain and lots of straw. 4697—Lb., 23c; 5 lbs., 68c, postpaid to 4th zone. Not prepaid: 5 lbs., 40c; 15 lbs., \$1.00; 25 lbs., \$1.35; 50 lbs., \$2.40; 100 lbs., \$4.25. Bags free.

SUNFLOWER—For the Silo

Produces an enormous tonnage of from 20 to 30 tons per acre. Fed to dairy cattle, it is found to be satisfactory in every way. The cows relish it and produce practically as much milk as when fed on the other ensilage. Sow any time before the middle of July, in rows far enough apart to permit cultivation. Use 8 to 10 lbs. per acre. Cultivate and harvest the same as corn.

4704—Lb., 30c; 2 lbs., 47c; 5 lbs., 98c, postpaid to 4th zone. Not prepaid: 5 lbs., 70c; 15 lbs., \$1.95; 25 lbs., \$2.95; 50 lbs., \$5.75; 100 lbs., \$11.00. Bags free.

SALZER'S SPRING RYE

Rye produces a crop that can be relied upon regardless of drought, wet, cold, or excessive heat conditions and many weed-infested farms have been cleared by growing this grain. As a fertilizer it is a wonder; it can be grown on thinner land than other cereals; it is valuable for summer pasture. 56 pounds in one bushel. Sow 1½ bu. per acre. 4672—Lb., 25c; peck, \$1.19, postpaid to 4th zone. Not prepaid: Peck, 60c; ½ bu., \$1.05; bu. (56 lbs.), \$1.95; 2½ bu., \$4.75; 5 bu., \$9.45; 10 bu., \$18.65. Bags free.

ROSEN WINTER RYE

The leading winter rye, a heavy yielder and of excellent milling qualities. Well filled heads and large kernels with a greenish tinge. Order some now for early fall planting and fall pasture or you may seed it this spring for temporary pasture. 4677—Lb., 24c; peck, \$1.09, postpaid to 4th zone. Not prepaid: Peck, 50c; ½ bu., 90c; bu. (56 lbs.), \$1.70; 5 bu., \$8.25; 10 bu., \$16.25. Bags free.

RAPE

It may be sown in the following ways: 1. In the early spring for sheep and hogs' pasture, 5 to 10 pounds per acre. 2. Alone in June or July, on newly plowed land. 3. With corn just before the last cultivation. 4. With rye, in August or September, for late pasture.

DWARF ESSEX RAPE—May be sown any time from early spring until August and is a success on nearly every soil in the United States and Canada. It thrives splendidly in cool weather. Sixty bushel of oats and 18 ton of rape per acre have been grown, without interfering with the harvesting of the oats, and the rape afterwards producing 18 ton of forage. Salzer's Dwarf Essex is genuine Holland grown. Sow 5 lbs., per acre. 4666—Lb., 28c; 5 lbs., 93c, postpaid to 4th zone. Progress or Wisconsin Pedigree No. 1611

The wheat that does not rust! Progress Wheat is the best bearded spring wheat for Wisconsin and is proving just as valuable in other states. Progress is a high yielding, rust resistant, bearded, white glumed, spring wheat and has a dark red hard kernel of superior milling quality. Straw is short and very stiff, heads compact and bearded, grain large, plump and beautiful. Over a five year test at the Marshfield Station, it outyielded every other wheat by 7½ bu. per acre. It was developed at the Marshfield Station from a selection of the Early Java. Its value is thoroughly established and it is one of the highest yielders, with grain of superior quality.

Smooth, yellow chaff which hugs kernel closely, thus resisting frost. Does not thresh out in the wind. Straw medium in height and very stiff. Marquis kernels usually retain their plumpness—hence its high milling value.

SOY BEANS

Soy Beans make a good growth on poor soils, especially if inoculated; succeed on acid soil where clover and alfalfa will not do; will grow as far north and south as corn and cotton; they are a splendid rotation crop, either short or whole season; they are equal pound for pound to oil meal in feeding value; they build up the soil and are a splendid green manure crop; they may be cut for hay any time after the pods begin to form. Many of our customers grow Soy Beans with their corn, planting them at the same time. This gives them two crops at harvest time or they let the sheep or hogs in to feed on the beans. Sow 45 lbs. in drills per acre, or 2 bu. (120 lbs.) broadcast.

Prepare the seed bed the same as for corn, by fall or early spring plowing, followed by disking and 2 or 3 harrowings to check weed growth and to prepare a warm compact seed bed. Sow the seed with your corn, or a little later. If seeded with the corn, go over the rows twice with the corn planter, once for the corn, and once for the Soy Beans, planting one Soy Bean grain for each grain of corn. When grown alone, Soy Beans may be sown with a grain drill or corn planter, or broadcasted. A corn planter however will insure a uniform depth of covering, which is important. On good soils, it is well to sow in rows to permit cultivation and on poor soils or when grown only for green manure, sow them solid with the grain drill or broadcast them. Sow them 1 to 2 in. deep. Cut for hay when the pods begin to fill, leave on the ground until wilted, then rake up and place in tall, loose cocks for about a week.

MEDIUM YELLOW

Popular throughout the Central States. Is quite early and produces a heavy crop of beans, which makes it desirable. 4302—Lb., 24c; peck, \$1.23, postpaid to 4th zone. Not prepaid: Peck, 66c; ½ bu., \$1.05; bu. (60 lbs.), \$1.95; 2½ bu., \$4.75; 5 bu., \$9.45; 10 bu., \$18.65. Bags free.

MANCHU SOY BEANS

This is by far the most popular Soy Bean in the middle west. It is a medium early variety, and it matures dry beans in about 100 days. The Manchu is considered to be the best of all Soy Beans. Seeds are yellow with a peculiar black seed scar. Very productive. The Wisconsin Experimental Station recommends it. 4309—Lb., 23c; peck, \$1.20, postpaid to 4th zone. Not prepaid: Peck, 58c; ½ bu., \$1.00; bu. (60 lbs.), \$1.90; 2½ bu., \$4.65; 5 bu., \$9.15; 10 bu., \$17.95. Bags free.

ILLINI SOY BEANS

Illini is a valuable variety, developed by the Illinois Experiment Station, and a fine bean for Wisconsin and similar latitudes, as well as more southern sections. It is very early, it yields heavily and grows a heavily leaved plant. Makes a fine quality hay. 4311—Lb., 22c; peck, \$1.18, postpaid to 4th zone. Not prepaid: Peck, 55c; ½ bu., 98c; bu. (60 lbs.), \$1.85; 2½ bu., \$4.50; 5 bu., \$8.85; 10 bu., \$17.45. Bags free.

EDIBLE SOY BEANS

Soy Beans as a food for man, have attracted much attention in North America at times, but in the past they could be little used except in flour, sauce, and oil. Soy Beans are of great value for diabetics! The difficulty in using them like field and navy beans for a hot dish, was due to their not cooking and baking to the necessary degree of softness.

Edible Soy Beans offered for the first time on our Seventieth Anniversary will cook soft and will bake soft, using your own navy bean recipes, and they make a delicious dish! Soy Beans contain the water-soluble and the fat-soluble vitamins, and contain at the most, but a slight trace of starch! Those on a low starch diet, need no longer be limited to soy bean bread alone. The seed we offer, may be used for immediate table consumption as well as for planting!

Prof. Geo. M. Briggs of the Wisconsin Agriculture College developed Edible Soy Beans after several years' work and we believe their use will be an enormous boon, not only as a health food but as a palatable dish. They yield 20 bu. and up per acre, maturing in about 85 days. Edible Soy Beans, so rich in nutrient constituents, are a fine substitute for meat. JERUSALEM ARTICHOKE

The new sugar crop for diabetics! Jerusalem Artichokes contain insulin and authorities find that these may be assimilated when diabetics cannot safely take any other carbohydrates, except in small quantities. They also supply levulose which is almost 50% sweeter than either cane sugar or beet sugar, termed sucrose. Many diabetics are eating Jerusalem Artichokes with great benefit, and hospitals should be apprised of a source of supply! They resemble potatoes and may be eaten like potatoes either fried or baked, as potato chips or as soup stock.

As a farm crop, it is one crop in which the tops and tubers may both be utilized! They may be both fed to all classes of live stock; chickens lay more eggs, cows give more milk, and hogs fatten and are free from disease. Jerusalem Artichoke tops alone yield 5 to 15 tons of silage or fodder to the acre, and of high quality, especially for dairy cattle. The tubers yield from 10 to 20 tons per acre! Grows on practically any soil but does best on light and sandy soils. The tubers are not good keepers, however, and therefore, dig them as needed. Prior to the ground freezing, dig enough for winter use and leave the balance in the ground for the next spring's use, after the ground has thawed. They are very hardy.

8 bu. plant an acre, spaced 3 ft. by 2 ft. in rows. One acre should keep 20 to 30 hogs from Oct. to April. Some leave the hogs root out the tubers right in the field. Plant like potatoes, planting the small ones whole, from early spring until June. Diabetics may order this seed stock for immediate table use! Price: Lb., 25c; 3 lbs., 50c; 5 lbs., 68c; 15 lbs., \$1.43, postpaid to 4th zone. Not prepaid: 15 lbs., 80c; 30 lbs., \$1.45; bu. SALZER'S EARLY SIX WEEKS POTATOES

We are nationally known as the largest retail seed potato house in the country, and handle more varieties of potatoes than any other company. Our seed is grown in the fertile Eagle Valley and Red River Valley of Northern Minnesota, two districts which have not as yet been surpassed for quality seed. Prices should not be judged by the price of eating potatoes. Our potatoes are grown primarily for seed purposes and all of them are U. S. Gov't. Grade No. 1. We also offer Certified stock in several varieties. U. S. Grade No. 1 requires that the potatoes be practically free from scab, blight, dry rot and damage caused by disease, and be graded to a minimum size of 1 7/8 inches. 60 lbs. in one bushel.

Salzer's Early Six Weeks stands alone as the great earliest general purpose potato! It is ahead of Salzer's Earliest in quality and yield, although not quite so early, but is 10 days earlier than the famous Early Ohio Potato. There is another great advantage in planting Salzer's

Early Six Weeks Potatoes and that is that it has never failed to produce a good crop of extremely early, very large tubers.

Salzer's Early Six Weeks is fit for market everywhere in just about six weeks. It is good for midsummer, good for late summer, good for fall, and magnificent to put into winter quarters, where it will keep splendidly and give you the finest flavored, best quality eating Potatoes imaginable. The yield was at the rate of 464 bushels to the acre, the Potato being round and of a reddish color like the early Bermuda Potatoes. The flesh is white and the quality very good." It is of a roundish shape, medium size and considering its extreme earliness, yields heavily. Uniform in size, smooth reddish skin, shallow eyes, flesh snow white. U. S. Potatoes are good size, elongated, shallow eyes and have a beautiful russet and netted skin. It is a heavy yielding late maturing sort, and should be planted on rich ground for best results. Rich Velvety Lawns All Summer Long

LACK of proper plant food in the soil accounts for more poor lawns, scraggly shrubs and mediocre flowering plants than practically all other causes combined.

You can have a rich velvety lawn all summer long, your shrubs and trees can have luxuriant dark green foliage, you can take pride in a garden filled with healthy vegetables and healthy flowering plants, if you will feed the soil with Milorganite.

Milorganite, a unique food, scientifically prepared, free from weed seeds and all harmful organisms, is unusually long lasting and easy to apply. Because it releases its plant food so gradually over a long period of time, it can be applied in generous quantities without danger of burning. Seeding can follow immediately after Milorganite is applied. Milorganite is granular, it contains no dust, it will not cling to plants or leaves, will not cake and harden in storage, nor does it have a tendency to form a hard crust on the soil.

For Luxuriant Lawns

Three applications a year, one in early spring, one in early summer, and another in the fall (4 to 5 pounds per 100 square feet on old lawns; 5 to 6 pounds to 100 square feet on new lawns—two handfuls weigh approximately ¼ lb.) will assure you a better lawn, with rich, dense turf. Milorganite not only gives a good, healthy color to the blades of grass, but, also induces better root development.

For Abundant Vegetables

Milorganite is an excellent source of plant food for flowers and vegetables. From 5 to 6 pounds per 100 square feet scattered uniformly over the surface and worked into the soil prior to planting produces sturdy plants that are vigorous and healthy. A second application of 2 to 4 pounds per 100 square feet worked into the soil about a month later, will ensure a better yield and better flowers.
